### PRINTED IN INDIA

PRINTED AND PUBLISHED BY BHUPENDRALAL DANERJEE AT THE CALCUTTA UNIVERSITY PRESS, SENATE HOUSE, CALCUTTA

My best thanks are due to the authorities of the Calcutta University for giving me every facility in the work and to my esteemed friend Pandit Amarendramohan Tarkatirtha of the Skt. MSS. Department, Calcutta University, for kindly helping me in reading the proof of the text portion, and also to the authorities of the India Office, the State Library of Berlin, of Munich, the University of Lund for lending MSS. or supplying rotographic copy of them. It is with great pleasure that I should mention here that the rotograph of the Siksā-pañjikā supplied by the University of Lund came as a gift to the Calcutta University. And finally I should offer my most grateful thanks to my teacher Prof. Dr. Suniti Kumar Chatterji for his kindly making valuable suggestions while he went through this volume in MS. as well as in proof. It however goes without saying that for all views expressed in the work the responsibility remains entirely mine.

University of Calcutta June, 1938

# SYMBOLS AND ABBREVIATIONS, ETC.

Thick types (Devanāgarī) in pp. 3-6, 35-44 and asterisks in pp. 7-34 and Arabic numerals on the left of all these pages will indicate the position of the reconstructed text in different recensions.

An asterisk will indicate a spurious passage. When put before the first hemistich the asterisk relates to the entire couplet and it sometimes relates to an entire couplet together with a third hemistich. An Arabic numeral appearing on the left margin between a pair of double dandas (e.g., 1131) signifies the position of the passage in the reconstructed text. A number prefixed to hemistich relates to it and the hemistich which precedes it; numbers with 'a' and 'b' after them indicate respectively the first and the second hemistich only of a couplet in the reconstructed text.

Bigger types in the Translation have been for the transcription and translation of passages of the PS, which have been considered original, and in Notes on them also such types have been used

#### INTRODUCTION

1

1. The Present Edition. Among the large number of works known as the Siksis' the Indian tradition' accords the position of the Ved han Siksa to the one connected with the name of Panini (see §28) Weber in his edition of the Paniniya Siks's (Indische Studien, IV) has however remained silent on this point. In his History of Sanskrit Literature too he did not give any decisive opinion in the matter, but later on Max Maller positively denied the validity of the traditional notion about the PS. being a Ved tuga.3 Since the days of Max Müller his view has been accented by almost all the scholars without the slightest protest. Prof. Liebich may be said to have been a notable exception in this matter'; for he muntums that the PS, though late in its present form, as old in ats contents. This view however has received very seanty attention from scholars who are otherwise very careful. Even two very recent writers who touched the subject, Mr. C. V. Vaidva and Dr. Siddheshwar Varma. have followed the view of Max Muller. Of these two the opinion of Mr. Vaidya deserves special mention because he is frankly against what he considers to be a late date (c. 1.00) B. C.) for the Rgyella suggested by Max Muller, and is for

<sup>4</sup> B Leebich, "Zor Funführung in die mötselle einbeimische Sprachwissenschaft," II, Heidelberg 1979, pp. 20; M Winterinit "History of Indian Letterature," Vol. 1, p. 285, footnote 2, also Oeschichte der Indischen Luteratur, Vol. III p. 382, footnote 1.

placing this work as early as 4000 B. C. But Mr. Vaidya does not make any effort to explain why the PS. should not be considered a genuine Vedānga belonging to the great antiquity he assigns to Pāṇini 2 and Yāska.3 Dr. Siddheshwar Varma however gives some arguments to prove the lateness of the PS. But these, as we shall see later on (§§25 ff.) do not seem to be based on all available materials which might have given him a different view about the age and character of the work.4 For he has known the PS. in three recensions only, while the work itself exists in no less that what may be called five recensions which read together critically are to give one a better idea about the age and character of the text. There is yet another scholar who not only considers the PS, to be a late work and hence not a Vedānga, but accords the same position to a Sūtra work ascribed, on very questionable grounds to Pāṇini.5 We shall see later on (§§ 31-32) why this view is untenable, and this will bring us face to face with the text-history of the PS. for which a critical edition of the work is essentially necessary. Hence no apology need be offered for undertaking such an edition of the work together with that of the two commentaries attached to its two (late) recensions. Reasons which have led us to believe that the PS. is the original Vedānga Sikṣā will be discussed later on (§§28-30) and as such it is to be placed as early as Pāṇini who in all likelihood was its author (see § 33). being the oldest treatise on the phonetics of Old Indo-Aryanand possibly of Indo-European—deserves to be studied carefully for the history of the Vedic as well as Sanskrit sounds.

<sup>&</sup>lt;sup>1</sup> History of Sanskrit Literature, Poona, 1930, Vol. I, Section I, pp. 25-40.

<sup>&</sup>lt;sup>2</sup> Op. cit., Sec. III, p. 8.

<sup>3</sup> Ibid, pp. 5 f.

<sup>&</sup>lt;sup>4</sup> The main arguments which Dr. Siddheshwar Varma adduces to show that the PS. is a not the Vedānga Sikṣā are as follows: (1) The PS. has no claim to be a mūlāgama or source of the Prātišākhyas, (2) Pingala, and not Pāṇini, is the author of the PS. The first argument has been refuted in §§ 28-30, and the second in § 33.

<sup>&</sup>lt;sup>5</sup> Dr. Raghu Vira, 'Discovery of the Lost Phonetic Sūtras of Pāṇini' in the JRAS., 1931, pp. 653 ff.

age of the Agņi Purāna (c. 800 A.C.) later than Pāṇini by much more than 1000 years we may be justified to make an assumption about its defective tradition.

The representative text of the AP. recension of the PS. has been obtained from the following materials:

- M. The Agni Purāṇa edited by Rajendra Lal Mitra and published in the 'Bibliotheca Indica' Series.
- P. The Agni Purāṇa published from the  $\overline{A}$ nandāśrama, Poona. MSS. ka, kha, ga, gha and  $\overline{n}a$  used for this text have been indicated by a, b, c, d and c respectively.
- V. The Agni Purāṇa with Bengali translation published by the Vangavāsī Press, Calcutta.
- (b) The Panjika Recension. As the commentary called the Sikṣā-Pañjikā does not contain the particular text, it follows, in a complete form, the Pñi. recension of the PS. had to be reconstructed to some extent conjecturally from the pratikas of passages handled in the commentary. The compiler of the catalogue of Skt. MSS. in the India Office Library, London, has wrongly considered this to be identical with the Yaj. recension. But on comparing the latter (Yaj. rec.) with this we find that in some important points the two differ. For example, unlike the Yaj. the Pñj. contains the hemistich annsvāra-yamānām ca nāsikā sthānam ucyate (PS. 11a) and npadhmānīya ūşmā ca jihvā-mūlīya-nāsike (PS. 14b) and in this respect it falls in a line with the Prk. recension. Two passages (PS. 9, 10) though not explained in the Panjika seems to have existed in the text used by its author1 (see Notes 26a and 28) and for this reason they have been included in the reconstructed text. Except these two, the Pnj. consists of 211 couplets of which 4-19, correspond to PS. 1-18, respectively. On comparing

<sup>&</sup>lt;sup>1</sup> The name of the author does not occur in any MS. But Mahamahopadhyaya Pandit Shivadatta in his introduction to the Siddhānta-kaumudī (ed. Venkateśvara, Bombay, says asya śikṣāyāḥ Rāghavācārya-kṛtaṇ bhāṣyam jāgartīti dik. Now in some MSS. the Panjikā has been called Bhāṣya (p. 17). It may be that Rāghavācārya is the author of the Panjikā.

the Pul with the Prk recension it appears that the latter is in inflated version of the former. There are no sufficient data to sugge than precise date for the Pay recension. But it appears by no means recent | For the Panul a quotes from one of the old authorities named Andrean of who e exact time we have no information, but as he is mentioned by the Nur S 1 a work, except for its interpolited passages, is as old as 200 B C, he was probably older than this time. He has also been mentioned in the Rk tantra Axikarana (Samayeda Pratisakhan)' and in the Siksa pral isa,' another commentary to the PS. There being no mention of Ambaran in phonetical works which are unliably very late we may assume that at their time his work was lot and the author of the Paunka flourished nos this earlier than a time when A's work was still available, and such was the ease with the authors of the available Rk tantra Vyakarana and the Siksa prakisa. Now the time for the Siksi prakisa being placed tentatively between 1000 A C and 1300 A C we may consider the lower limit to the siste of the Pan recension as the 1200 A C. Along with this should be considered the fact that the Agm Portina recension can le placed at the earliest in 800 A C. Thus it appears that the Phy recension existed between 800 and 1200 A C. The repre entative text of this receivion of the PS has been worked out from the following MSS and printed text

- A1 Manuscript of the Siks i-Panjika in the Royal Asiatic Society of Bengal, No. 2834
  - A" MS of the Pringkr in the same Society No. 1169
  - A 3 MS of the Panjiki in the same Society, No 4180 C
- B The rotograph of a MS of the same procured by the Calcutta University from the State Library of Berlin

<sup>1 64 65 . 11 6 7</sup> 

I I d Spryskapta Sastre Cutra (2)

Td SS p 88 Sce shott as eel ellelon

<sup>4</sup> See below on the Lrak recension

- C. The text of the Sikṣā-Pañjikā together with the PŚ. in its Rk recension printed in Benares, 1929 (Haridas Skt. Series No. 10) [Mr. Suryakanta Sastri mentions one such text printed in Benares in 1887 (op. cit., introd., p. 33n.)]. But we have not seen it. From Mr. Sastri's quotation it seems to agree with HL.].
- H. A manuscript of the Sikṣā-Paũjikā from the Royal Library of Munich. This was used by M. Haug.
- I. A manuscript of the Sikṣā-Pañjikā from the India Office Library.
- L. The rotograph of the Sikṣā Pañjikā presented to the Calcutta University by the University of Lund.
- (c) The Prakasa Recension. As was the case with the Pañjikā recension this also had to be reconstructed from the pratikas of the passages explained in the commentary called the Sikṣā-prakāśa. Having had to depend on rather imperfect materials we can never be sure that these restored texts were actually before their respective commentators. The most we can claim for these texts, is that they surely contained these particular passages in approximately the same form. But in case of the Prk. recension this claim can be admitted only subject to the limitation that the actual order in which some of the couplets occurred is not known. The Prk. passages, of the position of which in the text we are not sure, have been marked with an asterisk in the Table C, showing their relative position. This recension but for the inclusion of one hemistich (Prk. 22a) and the exclusion of one couplet (Yaj. 34) and the different order in which the different passages of the Yaj. recension have been arranged, is similar to the latter. But the confused manner in which the passages are available in the Yaj. recension gives us grounds to assume that the same were reduced to writing from memory at a time later than the composition of the Sikṣāprakāša and hence we have taken it as a separate recension.

The date of the Prakāśa recension may be considered to be later than that of the Pñj. for the simple reason that the

Ch. The PS. published along with the Sikṣā-Pañjikā from Chowkhamba, Benares, 1929.

This recension is scarcely much older than the 18th century; for MSS. of this used by Weber are all later than Samvat 1833 and we have come across no earlier MS. This is the most inflated version of the PS. and contains nearly 60 stanzas. Only  $17\frac{1}{2}$  among these may be taken as genuine. These are Rk 4-11, 13, 16-19, 22-23, 38-40a corresponding to PS. 1-8, 9, 11-13, 14a, 15, 16a, 16b-18, respectively. The nature and source of the remaining 42 couplets have been discussed below (§ 3).

Reconstruction. From a very close study of its five recensions eighteen only of the couplets appear to constitute the original PS. Only fourteen among them, however, occur in all the recensions, while the remaining couplets do not so But on internal evidence they appear to be organically connected with the fourteen couplets common to all recensions and hence surely occurring in the original PS. Problems connected with them have been discussed in detail in Notes given along with the translation of the PS. Sources of more than half of the remaining forty-two couplets which we consider to be later additions to the text of the PS. have been traced to different late Sikṣā 2 works. Of the remaining twenty couplets the source of which we could not explore, at least eight (Rk 1-3, and 56-60, and passages corresponding to them in other recensions), can probably be credited to the editors of different recensions. The remaining twelve were, in all likelihood, taken also from some late Sikṣās lost to us. Grounds on which we have considered a passage or group of passages spurious or later additions have also been discussed in Notes. From

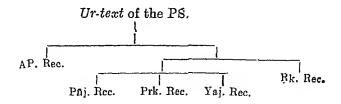

See the conspectus of Text-Units of the different recensions given at the end of this Introduction.

<sup>&</sup>lt;sup>2</sup> Gases of later Sikṣãs can to some extent be compared with those of the later Upaniṣads (cf. Winternitz, History of Ind. Lit., Vol. I, p. 239). In order to give authenticity to their own theory or practice later writers on Vedic phonetics have called their works Sikṣãs. These late works are nevertheless important for the study of Indo-Aryan phonetics.

a study of the interp late lips by saf app are that the cortolians of the Vedings Sikel have at different times made desperate efforts to preserve this small treatise consisting of only eighteen complete, from extinction Lest it should full out of my before later works on the subject, which for the time being gave better emidance to the reaster of the Velic text, they called some new materials from these and tagged them on to the PS in different relays. Even this methal though rearried to sometimes were not exclusively followed. To supplement this they ent it along with other works on similarly important subsects in the boly of a becommission big the Asia Parina which we'ms to be analyzing to this is the affect interpolation of the Blazwal-Gitt in the compa of the Mahabhamta Per a tabular statement of the growth ' of P3 showing the distribution of genure and superpolated passages in its different recensions, for Table A

Talle .1

From a study of the above table as well as the contents of the different recension we can suggest the mutual relation of the different recensions as follows:

language a similar pre-Aryan influence has already been postulated to account for the development of cerebral sounds as well as a portion of the Old Indo-Aryan vocabulary.1 If such an influence played any considerable part in giving shape to the Vedic religion it may be said to have practically finished a great part of its work about 1000 B. C.2 as far as the Indian Midland was concerned; for a very long time must have been necessary for the pre-Aryan Indians to get reconciled with the hostile newcomers and ultimately to accept their faith and culture. the ethnic constitution of the modern Indians who profess adherence to the Vedas shows that a great majority of them has come from non-Aryan stocks. Thus one will probably be justified to assume here a conversion—may be unconscious—of the non-Aryan people to Vedic religion, which was responsible for such a state of things; and such a conversion in all likelihood began to progress with considerable force about 1000 B. C. when the Vedic people and their ways were in all probability not only no longer displeasing but also was becoming attractive to the pre-Aryan people of the land, and a progressive section of them had already been Aryanised as far as their religion was concerned. And even some blood-mixture with the new-comers is much likely to have occurred at this stage. quite possible that the six Vedāngas partly grew up and partly took shape under the circumstances demanded by an effort on the part of these progressive non-Aryans and their descendants to acquire thoroughly the Vedic culture, a great deal of which was essentially convected with religious practices.

6. It is conceivable that these neo-Vedic people consisting of Aryanised non-Aryans as well as mixed Aryans took more than ordinary interest in Aryan faith and culture, and

S. K. Chatterji, op. cit., pp. 37f., 170f.

<sup>&</sup>lt;sup>2</sup> Oldenberg places the period of the Brāhmaņas and Upaniṣads (of course old ones) between 900 B. C.-700 B. C. (Buddha, : his Life, his Doctrines, etc., Calcutta, 1927, pp. 14-15). The Brāhmaṇas are characteristically the product of that period in which primitive Indo-Aryans were very much influenced by pre-Aryans of India.

vocabulary (nighantu). The contents of the Kalpa-sūtra which branched off later on to Srauta,2 Grhya and Dharma-sūtras may also be said to have received attention at that time when the neo-Vaidikas were trying to assume the appearance of thoroughbred Aryans and for this purpose they required a set of codified rules by following which they could be trained in Vedic ways. Oldenberg who does not pay any attention to the ethnic composition of the Vedic people seems to consider that a training in the Vedic ways was a priestly imposition on the other Aryan classes. (See 'Buddha, His Life, His Doctrines, His Order,' Calcutta, 1927, pp. 14-15.) As, for various ceremonies the observation of correct date and days of the moon was already a necessity even before the conscious Aryanizing activities began, the study of astronomy (jyotisa) commenced earlier 3; but it is probable that its results were not gathered in a written treatise till later when some of the earliest available texts of other Vedāngas have been composed.

9. One of the earliest references to the six angas of the Veda occurs in the Ṣaḍviṃśa Brāhmaṇa of the Sāmaveda which on linguistic grounds has been considered to be pre-Pāṇinian. And in the Muṇḍakôpaniṣad (circa 700 B. C.) too the six Vedāṅgas have been enumerated. In a passage of the Gautama Dharma sūtra (circa 500-400 B.C.) we learn that as his authorities on the administration of justice the king was to take among other things the Vedāṅga (VIII. 5; XI. 19; SBE., Vol. 33, p. 234; Winternitz, op. cit., Vol. I, p. 519). In the Āpastamba

l Prof. Lakshman Satup has a different opinion on this point (Translation and Kotes of the Nighaṇṭn and the Nirukta, pp. 221-223). He is also unwilling to recognize Pāṇini's grammar or Nighaṇṭu or similar other works as Vedāngas (loc. cit.).

<sup>&</sup>lt;sup>2</sup> Srauta Sūtras in fact represented the Kalpa sūtras most. For according to the Sīkṣā Prakāša commentary to the PS. kalpa is the science of rituals.

Dharma sütra (c. 500 B C 11 too Vedlügas have been mentioned twice (I. 10, 25, 21; II 1, 8, 10) This shirt work also enumerates the six angas, one of which is of course the Siksa (11 4, 8, 10) In spite of these very early references to Vedingas with or without their number, carlier scholars were not prepared to admit that such references implied the existence of six distinct books or treatises intimitely connected with the spend things' and in their opinion these references implied merels the admis ion of six subjects, the study of which was necessary either for the recitation, the understanding, or the proper secrifierd employment of the Vedie hymns (Max Müller, op cit , p 103, Winternitz, op cit, Vol 1, p 26%) But as we have seen before that conditions favourable for the rise of the Ved ingas were probably in existence as early as 1000 B C and as the beginning of these studies at the time of the early Brahmanas are attested by reliable references the existence of written treatises on Vedic nagus about 600 B C can by no means be considered to be impossible. The mot one can as ume about such works in the absence of suitable evidence. is that they have probably been lost. But to consider them to be non-existent after a lap c of nearly four centuries during which Vedic priests could compo e voluminous Britmanas will indeed be a unique piece of inconsistency. Max Müller a schematic division of the Vedic period into Chandas, Mantra, Brahmana and Sütra periods perhaps he at the back of this kind of unreasonable view. It is not possible that such closely divided ages ever existed; some overlapping has surely occurred. some at least of the Vedinga treatises were written in the Brihmana period-may be towards its end. For it is scarcely possible that when an energetic and intelligent people like the Indo Aryans were already composing works like the

### SIEFI

- 10. We have seen above under what possible conditions the Vedic priests might have turned their attention to the pronunciation of their sacred language and how this attention ultimately gave rise to the Sik51-vediaga. But, as can very naturally be expected, the word Sik51 did not continue to mean the same thing during the different stages of its evolution.
- 11. According to Panini (VII. 1, 53) the word Siks? has been derived from the deaderstive of 4sk, 'to be able ! Thus the literal maximum of sikes will be 'a degree to be able." It is very difficult to understand have this eather curious meaning finally developed into 'phonetics.' It is indeed due to this difficulty that Weber and Mix Miller have out the Gordian knot by a bold assumption that V sike means originally 'a desire to know (zu konnen suchen) though it must be admitted that 'knowing' cannot very well be equated to 'pronunciation' But, from the discussion made above of the conditions under which Siks as a subject of study arose, the original meaning ol this word seems to be plain enough. For were not the newly Arymized people with their different ancestral speech-habit ill able to recite the Vedic mintres in a faultless minner? Now it may well be assumed that the difficulty in their case who had a totally different linguistic basis was so great that learners among them had to have indeed a very strong 'desire to be able' to recite the Vedic humns. Possibly on such a hypothesis along can we understand how the original meaning of 'to desire to be able' came to be narrowed down 'to desire to be able to recite the Vedas correctly and from this finally

<sup>1</sup> See Luders, Vylradikil, p. 1.

<sup>1</sup> Weber, In l. Stul , IV, p. 315.

developed the sense of the study of pronunciation. Thus the original import of the term Siksā seems to have embedded in it an important history.

Now the Vedic pronunciation as we see from the Sikṣās and Prātiśākhyas was more or less a complex affair. But it is not so much possible that all phases of this complexity were felt all at once at the very beginning when attention began to be given to pronunciation; even in case of its being felt these different aspects of it could not be handled with success at the very beginning. Whatever might be the case it is pretty sure that with the early Vedic phoneticians (Sikṣākāras) matters were simple enough and only the fundamentals occupied their attention. Our evidence in this matter comes from Patanjali who in his definition of a typical priest (ārtvijīna) says that he should be able to use the (Vedic) speech with (properly inflected) words (pada), with (proper) accent (svara) and with the (properly articulated) speech-sounds (varnas).2 From this we learn that the observation of the proper accent as well as the right pronunciation of speech-sounds were Sikṣākāras' chief. object of study. And a later authority Visnumitra, a commentator of the RPr., defines the Siksā as svara-varnopadeśaka-śāstram, " the science which teaches accent and the speech-sounds (varna). Madhusūdana Sarasvatī too says the same thing more elaborately. Hence we see that the correct production of speech-sounds in general and the pitch and quantity of vowels comprised

<sup>&</sup>lt;sup>1</sup> In order to appreciate these we are to take notice of different stages in the phonetic evolution of the Middle Indo Aryan. See S. K. Chatterji, op. cit.

<sup>2</sup> yo vā imām padasah svaratšo' kṣarašo vācam vidadhāti sa ārtvijīnah (Mahābhāṣva. Vol. I, p. 3). Pada in this passage does not mean 'Versstollen' though in the Aitareya Brāhmaṇa this is the meaning (see B. Liebich, Zur Einürhrung, II, §§ 3-4) and akṣara does not mean here syllable in connection with metrics but with phonetics, for Patañali says later on that Vedic words are taught to those who know places of articulation adjustment of organs and the vocal words. This probably shows phonetics was studied earlier than metrics.

<sup>3</sup> v. 1. svara-varnôccaranôpadeśaka RPr., ed. Benares, p. 10; S. Varma, op. cit., p. 4.

the sole scope of the Siksa at the earliest stage of its development. It is quite possible that there was no written treatise on these topics, the Acarva teaching the young learner (brahmacari)1 by words of his mouth, and it was only a little later that the earliest manual on different topics of the Siksa came to be written down Now of the two phases of pronunciation that were considered important in the beginning, the proper iostruction of the speech-sounds was probably reduced to a system first of all We do not know what this system was like, but in view of somewhat phonetic arrangement of varnas in the Varna-samamnava or the so-called Sava-sutras 2 we are tempted to assume that this-probably in some earlier form-constituted the first treatise on the instruction of speech-sounds. The word samāmnāna 'traditional recitation' probably gives support to this view Kātvāvana also seems to give it support while he says vrtti sama vauartha upadesah, the enunciation (of the speech-sounds in the Siva-sutras) is meant for arranging the varnas in a proper order for (the facility of) recitation.3

The prescription of a long residence of the very young Brahmscarin (coin), mome cases from extra Argan groups) with the Scarga, in the GybyR-autria resulted and securs to be meant for a linequistic rebrift (drights).

<sup>1</sup> Prof B Faddegon maps that the Symm moter as a phonet cal classification deserves the highest praise ("The momenostechaics of Pagonia Grammar, Acts Greentalia, VII 1929, p. 54) Mr. K. C. Chatterp is agnost each a view (see Journal of the Depart ment of Letters, Calcutts University, Vol. XXIV)

In this translation we have ventored to differ from PataSyali on the lotel pretizion of the word cytix which he explains as fastra practital (ed hielborn Vol I, p 13) Our translation of the word as rectaited has as support from the well known couplet obligate that the world in the state of the word as rectained has as support from the well known couplet obligate the darks of titus, etc. (RFr., XIII 19 Va; 22, ct.) Compute also the world reflect that the state of the proper teaching of the Vedas. He says In the houry antiquity it was like thus proper teaching of the Vedas. He says In the houry antiquity it was like thus places of articulation of sounds, the adjustment of organs and vocal chord in producing them, they were given astruction to Vedas words. But today it is not so Ruahn the Veda (straight) one quarkly becomes a ratior of the same (Para kalpa that the Veda (straight) one quarkly becomes a ratior of the same (Para kalpa child and, souskaritionshales Beshmann syndaresum and the print, tebbyar totra thoma karandaupralajatohya Vassika isolos upodrigents and dapate na tatha Vedam athing tearnts saidhiro bhasant). The une of the word kalpa is very significant I literally means 432 million years but as used beer on the sous of 'hary antiquity Phil

- 13. There may however be some objection to the above view on the following grounds: (i) in the Varna-samāmnāya long and pluta vowels have been omitted, (ii) unvoiced stops have not been arranged in the same order as the voiced ones, (iii) the absence of yama, anusvāra, visarga, jihvā-mūliya and upadhmānīya in it and (iv) the h of the sūtra ha-ya-va-ra-t and the sūtra ha-l at the end duplicating h, is inexplicable.
- Now in reply to the first objection it may be said that a person learning short vowels correctly will naturally find it easy to produce their long and protracted varieties, and it is for this reason that the author of the Varna-samāmnāya did not probably like to make it unnecessarily cumbersome for the beginner by inclusion of these sounds, for the quantity of the vowel constituted a separate subject of instruction (see PS. 7). That voiced and unvoiced consonants have not been arranged in the same order in the Varna-samāmnāya cannot go against its phonetic character; on the contrary, by varying the places of articulation in the utterance of the sounds their mechanical and hence wrong pronunciation has possibly been guarded against. Or it might be for the sake of his Pratyāhāras Pāṇini had to arrange the sounds like this. As for the omission of yama and anusvāra, etc., it may be said that being development of sounds already existing in the Varna-samāmnāya they do not appear there. Regarding the repetition of the sound h it may be said that there were possibly two h's recognized in the Old Indo-Aryan, one voiced and another unvoiced. The fact that the second h is taken along with s, s and s, may justify us in making the above assumption. Prof. Sköld has tried to explain this double h by assuming that the Varna-samāmnāya might have been altered since its first formation and the last sūtra has probably been a later creation (Papers on Pāṇini, p. 20).

passage shows that the chronological distance between Patanjali and the early writers on Vedic phonetics as well as Panini might be very great or the progress of Buddhism that preceded Patanjali must have been very detrimental to the Vedic studies or both might be facts.

- 15 As for the authorship of the Varma-samāmnāya wo have no means of deciding whether it was made by some pre Pāṇnian authority (Siva, Mahešvara) or Pāṇnia.\frac{1}{2} All we can reasonably assume is that Pāṇni might have adopted the already existing material (the Siva-sūtras in their original form), with certain chinges, as the matrix of his pratyāhāras, and the Siksa connected with his name was perhaps the work to which was prefixed this Varna-samāmnāya and furnished the basis of Pāṇnia's grammar and phoneties. The relation of the PS. to this work which in its original form may go back to the first age of the Siksa-Vedanga (1000-600 B,C.) will be considered liter (§ 20).
  - 16. The scope of the Sikyi as given in the Taittinya Upanisad probably brings us to the second stage in the evolution of this Vedanga. According to this Vpinisad (1 2) the Sikei consists of stara 'pitch accent,' mātrā 'quantity,' bala 'stress,' sāma 'utterance in a medium tone,' and santāna (samhītā, 'cuphonic combination.' While referring to the Sikei in lus introduction to the Ruseda-bhāsya Sāyana thinks of the diveloped state of this Vedānga even when he says ranga-starādyuccurana-prakāro yatra upadisyate sā sikṣā, for he brings in the

passage from the Taitt. Up. (1.2). According to him svaravarņa, svara, mātrā, bala, varņādayah means sāma santāna. But the fact that Sayana in his Veda-bhasya quotes from Prātiśākhyas does not invalidate his testimony about the Vedānga Sikṣā which according to him is the PS. For he mentions no less than three couplets (PS. 8, 9, 10) of the latter work. As Uvata, one of Sayana's predecessors, in his introduction to the commentary of the Rk Prātisākhya has considered this work to be a Sikṣā 2 we can easily believe that Sayana was fully conscious about the historical relation between the PS. and the Prātisākhyas and he surely followed a correct tradition in according due honour to each kind of works on the subject. For the Prātisākhyas, though one of them has called itself a Vedāuga,3 were, as we shall see presently, the Sikṣā manuals belonging to the second stage in the development of this Vedānga, and Madhusūdana Sarasvati too was aware of this fact.4 The position of the Prātišākhyas in the history of ancient Indian phonetic literature seems to have been very much misunderstood.<sup>5</sup> And in order to appreciate their proper position as well as that of the Vedanga Siksa composed by Pānini we must now inquire into the nature and scope of the Pratisākhyas and their time.

¹ Sāyaṇa evidently used one of the very late recensions of the PS. for he says sa cângabhūta-śikṣā-granthe spaṣṭam udīritaḥ 'triṣaṣṭis' catuḥṣaṣṭir vā varṇā sambhavato matāḥ' etc. (Pnj. Prak. Yaj. and Rk. 3.)

tathāpy asyām śikṣāyām dantyamūlīya iti repho dantyamūlīya ity uktah (ed. Sāmaśrami, p. 14). Madhusūdana too calls Prātiśākhyas Śikṣās; see the Note 5 below.

<sup>3</sup> RPr. XIV. 30; Madhusūdana seems to be of opinion that the Prātiśākhyas too are Vedāngas.

#### PRITICIENTAS

- 17 Before entering into any discussion about the origin, nature and scope, etc., of the Printinhyas it would be proper to examine the term about the meaning of which there seems to exist some misunderstanding. The word consists of their parts. Fifth and the formative element. Of these, the exact meaning of GMA should be determined first of all.
- 18 The Sikha, as is well known, relates to the different Vedie schools, but we do not know whether the likhi refers to the one undexeded Vala or to each of the different Vedas, such as, Rk. Saman, Yajus (Black and White), etc. Let us first consider the ea e of an undivided Veda th story occurring in the Mahahharata and some Puragas that Kreon dealphyana Muni divided the Veda into four parts we may infer that the Vedic mantras existed once as in undivided corpu- The fact that particular matters are found in more Vedas than one, hints that the mantris were collected under different names chiefly with a view to their ritual use. For example, the collection of mantrix made for the use of the Hotr was called Rk and that for the ne of the Adh vary u was exled the Yasus while the Udgātr's collection was called the Saman Now the principle according to which the particular inantrus could be but under different labels may the same as that which has been traditionally at the root of the division of the Vedas into sakhās For, from Mahadeva s commentary on the Hiranyakesī

<sup>1</sup> For detrils see Salthagaga Lelfaladatra জীংনিকৌ (Ilrani koga) Calcutta 1311 ሁር pp 10.0 f (ert cle on "Vedaryāsa )

Sūtra we learn that one of the reasons which gave rise to śākhās was the manner of reading the Vedas.¹ This being the case we can well say that from one original Veda came out first of all śākhās like Ŗk, Sāman, Yajus, etc.² For, the uttering of Vedic mantras by different classes of priests was different; the Hotr recited the Rcas with his normal voice, the Adhvaryu muttered the Yajūmsi silently, while the Udgātr chanted Sāmans loudly.³

19. But the threefold śākhā, if we are allowed to postulate this, must have existed at the very beginning of the period which witnessed the growth of Vedic ritualism, or roughly in the period preceding the Brāhmanas. From this period onwards the Vedic people, that is, the Aryans together with the pre-Aryan ethnic element which they might have absorbed, began to scatter themselves in widely separated regions of the Indian continent where Aryanization followed. This diffusion of the Vedic people, their culture and religion gave rise, in course of time, to difference in pronunciation of the mantras, and mantras being orally transmitted some of them came, in course of time, to be read in different places with more or less different word order, and a difference in the order of stanzas constituting them also arose. It is probably these factors that brought forth different śākhās in the generally accepted sense and they were, in fact, šākhās of sākhās or secondary šākhās. Prātiśākhyas relate to all such śākhās in existence at the time of their composition or final redaction. But separation among the different branches of the Vedic people resulted not only, in the

<sup>1</sup> sākhābhede' dhyayanabhedād vā sūtra bhedid vā. See Max Müller, Ancient Skt. Literature, London, 1859, p. 127.

<sup>&</sup>lt;sup>2</sup> Max Müller also writes; "The word (i.e., śākhā) is sometimes applied to the three original Samhitā, the Rgvedr-samhitā, Sāma-veda-samhitā and Yajur-veda-samhitā, in relation to one another and without reference to subordinate śākhās belonging to each of them" (op. cit., pp. 123, 124). Yāska's use of singular number with reference to the Veda deserves notice (1.20). Prof. Sarup however takes this differently. See his transl., p. 221.

Max Müller, op. cit., pp. 122, 471 f.; Pūrva-Mimāmsā-Sūtrās (II. 1. 35-37).

difference of pronunciation of the manters, but all oil variation of their specifical rules and social laws and customs. Thus the sakbās camo to relate allo to a difference in such matters, though Pritis is by as had nothing to do with such sakbās?

20 Now the exact sense of sikhis basing been determined we shall proceed to ascert an the sense of the term Pratical has According to Max Muller who wrote in 1859, 'Pritial has does not mean, as has been suppo ed, a treatise on phonetic peculiarities of each Vida, but a collection of phonetic rules recular to one of the different branches of the four Vedas, ac., to one of those different texts in which each of the Vedas had been handed down for ages in different families and different parts of India . Plus view has been subscribed to by Whitney in his edition of the Atharya veda Pratisakhya (1662) ' Since then almost all the scholars have followed this view. But such an opinion seems to have been expressed on very unadequate grounds. For, Mulhaya, quoted by In mendra Sarasyati in his gloss on the Siddle Kau (P IV 3 59), explains Pritisching as prate &il ham bharam . And Anantablaffa too in the introduction to his commentary to the Sakla Lams Profifed by a defines the word similarly and shows, after an elaborate discussion, that haty count's work relates to all the fifteen soldies which developed out of the Sukla Yapur vedy Troin the testimony of Duren also we learn that the Protracklya related to more schools than one For in his commentary to the Nirukta (I 17) he says I im paread int? spacarana pareadu era nath

pratisākham niyatam eva padāvagraha-pragrhya-krama-samhitāsvaralakşanam neyate tāni imāni pārsadāni prātiśāklināni itu arthah.1 'Those Pārṣada books by which in a Pariṣad of one's own Carana, the peculiarities of accent, samhita, krama-reading, pragrhya vowels and separation of words are laid as enjoined for, and restricted to each śākhā are called Prātiśākhyas.' Max Müller who quoted the above passage may be said to have misunderstood it. Pratisākham which he translated as 'to certain śākhās' should be equivalent to 'to each śākhā.' It should be noticed in this connexion that Max Müller's translation of the passage is not in agreement with his own definition of the term Prātiśākhya quoted above. However the fault lies principally with commentators like the author of the Vaidikabharana whom Max Müller in all likelihood followed. For in the last named work which does not say anything about the exclusive phonetic character of śākhās in a Prātiśākhya, it has been suggested that the Prātiśākhyas relate to a group of śākhās.1 This suggestion seems to give partial support to Mādhava's and Anantabhatta's testimony referred to above. For it does not restrict Prātiśākhyas to one only of the many ร์ลิโปลัธ.

The word Pārṣada which is a synonym for Prātiśākhya seems to give some clue to the solution of the problem whether Prātiśākhyas related to only one or all the śākhās of a Veda. In Nārāyaṇa's commentary to a passage (ācāryaṇ sapariṣatkaṇ bhojayet sabrahmacāriṇaś-ca in the Gobhila-Gṛhyasūtra-bhāṣya we find the following saha pariṣadā śiṣyagaṇena vartata iti sapariṣatkaḥ taṇ. samānaṇ tulyakālaṇ brahmacāritvaṇ yeṣāṇ ta ime anyaśākhino'pi sabrahmacāriṇaḥ savayo'bhi adhīyante.² From this passage we learn that students belonging to different Vedic schools could take their lessons from one Ācārya who together with his pupils constituted a Parṣada or Pariṣad. Thus

<sup>&</sup>lt;sup>1</sup> Max Müller, op. cit., p. 131; S. Varma translates Mādhava's words as belonging t each individual (prati) śākhā (op. cit., . 12).

On the T. Pr., IV. 11; Siddheshwar Varms, op. cit., p. 13

Parsals saftry evidently related to such Parisals comprising different schools of a Vela. Hence it some in titable to conclude that Parisals-saftry or Pratrakhyas related to each one or all the sakhas of a Vela.

21. By taking what so my very much to be a wrong view about the meaning of the word Praticiplity or the score of a work so manol. Whitney felt some un asmess over manning the Pritivikhya of the Kripa-Yajur-veda as the Taittiriva Protistikhya 1 The very fact that thus Protisikhya mentioned the Black Yangs echools life Munisp aka and Alwaraka as well as Taittiries, made it very memoris for him to attach the Principles to the last named school (Tuttersa) only But still be considered it prud at to adopt the name Putt. Pr. for the work, though it did not quite +its fo his en it critical acumen. For he confesses that 'we are for from fully compachending as set the origin, inture and relation of the "schools" of Veihe study and their accepte I texts or CM Is .' This, however, was not the attitude of Whitney a few years eather when he edited the Athary is redy Pr. and had recourse to conjectures of surroug degrees to explain away the disconlance between the theory current in his time about the insture and scope of Protesikhy is and the characteristics of the Pr in band. He attached this Pr. to the Saunala school of the Atharaa-veda and troubled himself about the problem why in certain points it was not in complete agreement to the Veda of this school. He little dreamt the Pr. in question related also to other. Athers i. Sikhi's which in all likelihood perished or were till then untraced." Hence in his edition of the Atharva-veda Pr Whitney writes 'It is, ... pecuharity of the authors of our treature to give their rules a wider scope than the vocabulary of the Atlanta

<sup>1</sup> Soop 427 et Wiftrey auf af thus I ettelith gu mas public et in 1871,

<sup>2</sup> The Pairpalate fakt a of the Atlanea sets discovered after W1 in years of the Atlanea Pr about the remembered in this connext of

requires, in many instances contemplating and providing for combination of sounds which are found nowhere in the body of Vedic scriptures, and for which accordingly the commentator is obliged to fabricate illustrations (p. 583).' Now whatever may be said about the genuineness of examples given by the commentator who was possibly very late, it cannot be said that the author of the Prātisākhyas based his rules on non-existing materials. In view of the tradition that Vedas, in different periods, came to be lost and had to be recovered, it will not be difficult to assume that some of the śākhās with their texts perished beyond recovery.1 Even if his allegation against the commentator in some rare cases may not be untrue, Whitney himself has admitted that 'there are certain number sentences among those given by the commentator which have more or less clearly the aspect of genuine citations from. Vedic texts; and although some might be regarded as instances of carelessness on his part quoting by memory from another source than his own Veda, we cannot possibly extend this explanation to them all; it must remain probable that, in part at least, they were contained in some hitherto unknown  $c\bar{a}kh\bar{a}$ of the Atharva-veda.' 2 From these passages one will easily realise the untenable nature of the meaning given to Prātiśākhya by Whitney, his predecessors and followers.3

22. Max Müller, in his introduction to the Rk-Prātiśākhya (1870) does not care to examine in details the deviations of the Prātiśākhya from the available Rgveda text (of Sākala recension). This may be said to be due particularly to his strong belief that Prātiśākhyas were concerned with one śākhā of a Veda. Hence, he very summarily disposes of the question of relationship between the Prātiśākhya and the Rgveda (Śākala) text by saying that, as "in all essential points our own best

<sup>1</sup> Hopkins, 'The Great Epic of India,' p 5.

minuscripts of the text agree with the ditain the Pritisaklija, we may prudently conclude that the text of the Reveals we possess is the same as seen by the authors of the Pratisaklija more thin 2000 years ago "I Along with this should be remembered what he himself wrote in this connection eleven years earlier. In the History of Ancient Sanskrit Laterature (1859) Max Müller wrote "There is not a single MS at present existing of the Reyeda in which rules of our Pritisaklija are uniformly observed, and the same applies to the MSS of the other Vedas"?

22 (a) Burnell, too, in his introduction to the Rk-tantravyākarana (Mangalore, 1879), considered by him to be n Pratisakhya of the Sama-veda, thought that Pratisakhyas belonged to one of the many sikh is of a Veda He attached the Rk-tantra to the Kanthumi Sakhi alone and made some conjectures as to why this Pratisikhya could not be connected with Jaiminiya. Talavakira or Riniyaniya sikhis, and he assumed that Pratisakhyas connected with these sakhas had been lost But all these assumptions seem to be uncalled for For example, characteristics of some Sama sakhas such as the cerebral l and short e and o were in all probability phonetic developments occurring or recognized later' There can be nothing against such an assumption there is the traditional view that the difference of sikhas arising from difference in uttering mantras is without any (historical) beginning, and from this wo may deduce that even after the Pratisakhyas were written new differences in pronuncia-

tion could arise between several groups of Vedic people and did actually arise and thus the process which brought into existence different śākhās was practically without an end.¹ It will be found on a closer study of the various Prātiśākhyas and Sikṣās that the difference of pronunciation among Vedic śākhās owe their origin to the forces which tended to develop the Old Indo-Aryan to the Middle Indo-Aryan and the later to the New Indo-Aryan dialects.² But Whitney, Max Müller and Burnell however viewed the matter differently and so did Weber before them.³

23. The Prātiśākhyas belonging as they do to the second age of the study of the Sikṣā Vedānga had a much wider scope than the manual of the subject that was produced in the first age. From a study of the contents of the Prātiśākhyas we find that the scope of the Sikṣā as given in the Taittirīya Upaniṣad (I. 2) applies to a considerable extent to the Prātiśākhyas which

¹ Mr. Suryakanta Sastri in his Introduction to his new ed. of the Rk-tantra follows Burnell in assigning the work to the Kauthum śākhū (pp. 2-6). But Mr. Sastri has also given some fresh arguments in support of Burnell's theory. These, however, are by no means unassailable. That the Jaiminīya text of the Sāma-veda did not give the peculiarities provided for in the Sūtrās 58, 94, 112 and 114 can be explained also by the assumption that the phonetic changes in question might have arisen later or the Pratiśākhyas being manuals of pronunciation had not much influence with the seribes, and discrepancy between the written text and its pronunciation can well be assumed to have existed in early times also From the emphatic manner in which the use of written texts of the Vedas has been discouraged we can well infer this. For the Nāradīya-Sīksā says:

Pustakapratyayādhītan nādhītam gurusannidhau rājate na sabhāmadhye jāragarbho iva striyaļ. (II. 8. 19),

and the Yājňavalkya-Sikṣā has the following:

gītī śīght ī śirah-kampi tathā likhita-pāţhakaḥ anarthajūo'lpakaṇţhaś ca ṣaḍ ete pāṭhakadhamāḥ. (198).

The long quotation which Mr. Sastri has given in support of his connecting the Rk-tantra with the Kauthuma śākhā aloue of the Sāma-veda, is not at all convincing. According to this question the Kauthumī śākhā seems to include Nārada, Lomaśa, Gautama and Naigeya schools, He ought to have explained this fact.

- <sup>2</sup> Bloomfield and Edgerton, Vedic Variants, Vol. 2, Phonetics, Ch. I, especially §§ 20-43. See also Max Müller, Ancient Skt. Lit., p. 117.
- <sup>3</sup> Weber, Indische Studien, IV, pp. 67 ff. See also Winternitz, A Hist. of Ind. Lit., Vol. I, p. 281. According to the Taitt. Up. Siksā treats of the follwing: varna (speech sounds) svara (pitch accent), mātrā (quantity), bala (stress). sāma (utterance in a medium tone), and samhitā (euphonic combination).

Contra this, see Winternitz, op. cit., Vol. I, p. 285.

should be called see on dary Siksis. When judged by the standard set up by the Tartt, Up. for Siksi (phonetics), the Prati-Sikhyas may be found wanting in certain respects.2 For example, the treatment of same and bala is non-existent in them. But it can well be assumed that as these two topics were exclusively matters of oral instruction the Pratically as did not discuss them

21. As for the date of the Praticiblian which as we have seen can be called the secondary Sike is, their rise and development, at least of the older ones among them, can be roughly placed between 600-200 B.C a A detailed discussion about the date of the Pratisikhvas will carry us far beyond the scope of the present work. But in support of the lower limit to the date of the early Praticikhyas it may be mentioned that the passages from the Tuttiriya Pr and Atharya Pr occur in the Mahibhiaya of Palanigh (c 200 B C) Patanigh's foon to the Pr has already been pointed out by Dr. Siddheshwar Varma but the acquinitance of the Bhisyakara with the A Pr. has not been pointed out before. Under the Varttika to Pamini I. 1. 10. Patrifiali quotes sprstam sparsanam karanam. Isatspretam antaksthänäm, exertam üşmanam Isad itu anurariate, scaranam ea [MSS. A B riegtam fead iti nierttam] Here we have sutras 29-32 of the APr with the difference that the word order of the satra asmanam civrtam ca his been changed and ca has been omitted. The accompanying critisian Pataŭiali's quotation shows that he has quoted from some sūtra work which was evidently the APr.5

# PANINIYA SIKSA

25. Its contents. The PS. as we have reconstructed it from different recensions, contains only eighteen couplets in ann stable metre though the longest (Rk) recension includes no less than forty-two additional couplets most of which are in the same metre. The extreme shortness of this Siksā-Vedānga can well be compared with that of the Chando-Vedānga which is embedded in the Chandah-sūtras of Pingala and contains only 87 sūtras which will searcely be much bigger in extent than the PS.<sup>2</sup> But in spite of its extreme brevity the PS. was more or less a complete manual on the pronunciation of the Vedic speech-sounds in general at the time the work was composed.

In the first two complets the PS, enumerates the speech-sounds (varnas); vowels and consonants have been separately mentioned. The next four complets (3-6) give a theory of production of the speech-sounds. This is followed by a five-fold classification of these sounds according to their pitch, quantity, place of articulation, primary effort (prayatna) and the secondary effort (anapradāna) (7-16). It goes without saying that pitch and quantity primarily concerned vowels while the remaining items all the sounds. The sounds mentioned in the PS, are shown below in phonetic script according to their classes.

<sup>1</sup> Some of the additional passages, e.g. Ik 46, 47 are not in verse. We however, have called them couplets only as a matter of convenience.

26.Its Language. Within the short extent of eighteen couplets we have one clear instance of Vedic usage (see Note 9, see also Note 18). There is another expression which also according to the Kāśikā follows the Vedic usage (see Note 9. on so dirnah). Thus we may be justified to conclude that the PS. was written in a late form of the Vedic speech. The text of the Rk recension of the PS. as printed in the Siksa-Samgraba (Benares, 1893) has been furnished with accent marks. But as eighteen only of the couplets have been considered to be original we have no sufficient ground to take these accent-marks to be very old. But on looking to the archaic language of the PS. we are tempted to assume that the editor of the text of the Rk recension, which served as the basis of the SS. text, must have had behind him a good traditional support. It is quite likely that these accent-marks in the PS. fell into disuse just as the accent-marks in the Aşţādhyāyī and Pāṇinīya Dhātupātha did.1 Pāṇini's sūtras such as svaritenādhikārah, anudāttanita ātmane-padam (I. 3. 11, 12) clearly indicate that these two works were once accented. This possible existence of accentmarks in the PS. again speaks for its great antiquity.

27. That the PS. has been composed in the anustubh metre has been considered by Max Müller to be the sign of its lateness. On this point, after emphasising the antiquity of the Rk Prātisākhya he says, 'By comparing Saunaka's chapters

<sup>1</sup> See Wackernagel, I, p. 283.

But he discusses later on (under I. 3. 25) a theory of the production of words, which is identical with that available in the PS. (3-6). Bhartrhari (c. 650 A.C.) too in his Vākyapadīya (I.47)<sup>2</sup> seems to follow the same theory, though he does not mention any Sikṣā or Sikṣākāra. But from Sabara's or Bhartrhari's probable acquaintance with the PS. we do not learn anything about the authorship of this work. It may be that like the compiler of the Agni Purāṇa they were not aware of the name of its author though it was surely looked upon by them as the most authentic Sikṣā or the Vedānga Sikṣā. The same may be said of Durga (c.1300 A.C.) the commentator of the Nirukta, and Sāyana (1400 A.C.), as well as Somesvara4 and Rāmakṛṣṇa5 about the date of whom we have no definite idea. Madhusūdana Sarasvatī<sup>6</sup> (c. 1500 A.C.) as well as the author of the Pārāśarī Sikṣā' knew the PS. as the Vedānga and knew Pāṇini as its author. From the description of the Sikṣā given in the Sukranīti<sup>8</sup> it appears that the author of this work too knew of the PS. to be a Vedānga. Thus we see that though there might have occurred some break in the tradition about Pānini's authorship of the PS. it was taken as the most important Sikṣā or the Vedānga by eminent authorities probably from 500 A.C. to 1500 A.C. The question why the authorship of the PS, came later to be obscured is difficult to answer.

vitarkitah purā buddhyā kvacidarthe nivešitah karaņebhyo vivīttena dhvaninā so'nugīhyate.
v.l. kāraņebhyo vivīttena is evidently due to confusion.

- 4 Max Müller, op. cit., p. 122.
- 5 Ed. Simon, p. 42; Siddheshwar Varma, op. cit., p. 5.

<sup>1</sup> mahatā prayatnena sabdam uccaranti vāyur nābher utthitah urasi vistīrņah kaņthe vivartitah mūrdhānam āhatya vaktre vicaran vividhān sabdān abhivyanjayati. PS. 8-4.

<sup>3</sup> Durga in his introduction to the Comm. of the Nirukta quotes PS. 3, from what he calls the Vedanga Sikṣā (see Nirukta in Bomb. Skt. Series, p. 24). The date of the author is about 1300 A.C. (Introduction to the Nirukta, by Sarup, p 50).

<sup>6</sup> tatra sarva-redasādhāraņašikṣā.....atha šikṣām pravakṣyāmīti pañcakhaṇḍātmɨkā Pāṇininā prakāšitā. Prasthāna-bheda, ed. Weber, p. 16.

<sup>7</sup> SS. p 60.

svaratalı kälatalı stlığına-prayatnänupradānatalı. savanādyais ca sā siksā varņānām pātha-siksaņāt.

There seems to be another fact which goes in favour of the view presented above. As we have seen before (§ 25) that the PS. has a theory of production of the speech-sounds (3-6). The (Taitt. Pr.¹) surely betrays an acquaintance with it. The acquaintance of the Vāj. Pr. is probably clearer. The Rk. Pr. (I, 18) too seems to have known this. It is not clear if the APr. knew of it. But the silence of the last work may well be explained by assuming that its author did not probably consider it necessary to include the theory in his sūtras, for he might well have assumed a knowledge of it on the part of the readers.

Thus we can well take the PS. as the Sikṣā-Vedāṅga. This view will be further strengthened when we shall discuss below the relation of the PS. with the Aşţādhyāyī and will produce evidence to show that the two works in all likelihood proceeded from the same master's land. But before taking up the relation between the PS. arld the Astadhyayi we shall have to examine the claim of another voork for the position of the Vedānga. Dr. Raghu Vira in an article named 'Discovery of the lost Phonetic Sūtras of Pānini' published in the JRAS, 1931, (pp. 653 ff.) claims to have discovered the lost Phonetic Sūtras of Pāṇini. From the several arguments which he puts forth with great enthusiasm it may appear that the sutra work of his discovery (DPS. or Dayananda, Phonetic Sutras) is the Vedānga Sikṣā. But on a closer examination of the arguments we find that they are not as sound as |Dr. Raghu Vira believes them to be. He starts with the assuraption that the DPS. is the lost phonetic sūtras of Pāṇini though no independent authority

<sup>&</sup>lt;sup>1</sup> डरिंग सन्द्रम्। कर्ण्डे मध्यमम्। शिरिंग तारम् XXIII, 10-12. Whitney, XXIII. 10), See foot-note of \$ 28.

The view of 'some' who took 'h' as an urasya sourid can be compared with the PS. 10. which has 'h' as aurasa under certain circumstances.

the fourteen sections of the Vedānga Prakāša, a grammar which Svāmī Dayānanda compiled for the use of the Jedic students. It is probably due to inadvertence that Dr. Raghu Vira did not mention this fact in his article. The different sections of the Vedānga Prakāśa including the first one have also been issued separately. The first of these sections bears the title of the Varnoccāraņa-Sikṣā by Pānini. This sūtra-work as has been shown by Dr. Raghu Vira (loc. cit.) resembles the Varna-sūtras of Candragomin, the Buddhist grammarian, who flourished about 500 A.C.1 Considering the great influence which Candragomin exercised on the grammarians of Pānini's school (the Kāśikā and the Vākyapadīya showing traces of such influence) it is quite possible that some late grammarian re-edited and amplified the Varna-sūtras of Candragomin and fathered this upon Pānini, evidently for imparting to it a superior authority. Though there is no sufficient material to prove this we are inclined to suggest that this late grammarian was Svāmī Dayānanda himself who. among other things was a very close student of Sanskrit grammars as his Vedāngaprakāśa and the edition of Pānini's Aştādhyāyī show. But whatever may be the actual fact about the authorship of the DPS., it is sure that the work is neither from the hands of Pāṇini nor an old one.2

33. Its Author. Now if we are sure about the fact that the PS. is the real Vedānga Sikṣā we shall have to take up the problem of its authorship. Though the work has probably been drawn upon by very old authors<sup>5</sup> its author has not been

<sup>&</sup>lt;sup>1</sup> This date is assigned by S. R. Belvalkar (Systems of Skt. Grammars, p. 58). Dr. Siddheshwar Varma places C. in the 7th century (See his Critical Studies, p. 8) at the latest.

<sup>&</sup>lt;sup>2</sup> Dr. Paul Thieme with a somewhat different line of argument disallows the genuineness of Pāṇini's Phonetic Sūtras discovered by Dr. Raghu Vira (see his Pāṇini and the Veda, p 86). We do not agree with him on all points.

<sup>&</sup>lt;sup>3</sup> Dr. Paul Thieme thinks that if Patanjali knew the PS. as Pānini's work, he would have referred to it 'in unambiguous terms' and would have treated it with the same respect as Pānini's grammar (p. 86). Hence, as the PS. has not been referred to by Patanjali, one may according to Dr. Thieme reject its relation with Pāṇini. But it would be a mistake to place too much confidence on the argument of silence, which may be otherwise explained.

mentioned till very late (see § 29). The earliest evidence about the existence of the complete work is perhaps the Agmi Purina which is a smally placed in the 800 \ C. But it does not refer to Panini as the author of the Siksi though in case of the metrical version of Pingula's propody the source has been mentioned ( ce Notes on 1) This can well be tal on to mean that to the compiler of the Agm Puring the authorship of the PS was not known But we have seen before (§ 29) that Madhu-adama Sarasvati in the 15th century in no unambiguous terms considers Pimm to be the author of this Cike though the Sike i-Praises, a commentary to the PS which is no sibly earlier (c. 1200 A.C.) than Madhu-udana, ascribes the fatter work to Pingala. Thus the problem of the authorship of the PS with its late and mutually conflicting data seems to posse a no dependable means for its solution. But we need not feel hopele's in the matter External evidence failing we turn to the PS it clf and find some important hints which are being discussed below

(a) It is usually known that Pannin was a great grammarian but his greatness as a phonetician is no less considerable. But infortunately it has scarcely been noticed, and far less um phasised. This sort of defective appreciation of Pannin is due to the mistaken notion commonly held that the Pransikhyas, even if they are not actual grammars, are grammatical writings. But in fact the Pransikhyas are purely phonetical treatises. Viewed in this light we find that Pannin has treated in his gram are strate (pitch) and malifa (quintity) of vowels as well as suphita (cuphonic combination). These items as we have seen before (§16) are, according to the Tauti. Upanisad, the three

<sup>&</sup>lt;sup>1</sup> W niero tr Vol III pp 331-337 Lakabman Sarup the Nightque and the Nicukts Positis Translation and Notes London 12<sup>3</sup> 1 2<sup>3</sup> 8 Narms Critical States in the Piocetic Observation of In Nav Grammar and pp 14 15, 8 Sastri, The Watantra Introductin pp 12

<sup>5</sup> The Anjidhphyl treats of arone in chapters VI (1 892 1.0) and VIII (1 2771) and in many other lines. The matri has been treated in chapter VI (3 111 138) and the samit of in Chapters VIII 72 fand 8 114 60 at VIII 2 14 43449.

among the six branches of the Sikṣā or phonetics. Can there be a better evidence of Pāṇini's masterly knowledge of phonetics? But this evidence alone is not sufficient to identify Pāṇini with the author of the PS. What we may gather from the above is that of the two names Pāṇini and Pingala proposed for the authorship of the PS. the case for the former is stronger.

- (b) Besides this a comparison of the contents of the Aṣṭā-dhyāyī and the PS. further strengthens the claim of Pāṇini to the authorship of the PS. From such comparison we gather the following facts¹ pointing to the handiwork of the same author.
- (i) In the PS. Pāṇinian Pratyāhāras, such as ac, car, ghaś, yaṇ, jaś, śar, hal, have been requisitioned.
- (ii) ku, cu, tu, tu and pu have been used to indicate respectively k, c, t, t and p groups. This convention has been formulated in the Aṣṭādhyāyī (I. 1. 69) anudit savarņasya cā 'pratyayaḥ.
- (iii) The PS. (17) includes the Anunasika into speech-sounds while its definition has been given in the Aṣṭādhyāyī (I. 1. 9.) mukha-nāsikā-vacano' nunāsikah.
- (iv) The explanation of terms like hrasva, dīrgha and pluta has also been given there (I. 2. 27, ukālo'j hrasva-dīrgha-plutah).
- (v) According to a rule of na-tva as laid down in the Aṣṭā-dhyāyī (VIII. 4.1). n after r and s turns to n. From this we get r as a cerebral sound. According to the PS. (11) too r as well as s is a cerebral sound (Prātiśākhyas have r either in the roots of the teeth or close to the teeth (see Varma, op. cit., p. 6).

All these fairly settle the question of the authorship of the PS. Now the important question arises which of the two, the Aṣṭādhyāyī and the PS., was composed first. To find this out we must remember once more the different branches of the Sıkṣā as enumerated in the Taitt. Upaniṣad, varṇa, svara, mātrā, bala, sāma and santāna. Pāṇini as we have

Pāṇini's Sikṣā brought to light by Dr. Raghu Vira lacks similar facts, hence Dr. Paul This ne rightly rejects the genuineness of the work (see op. cit., p. 86).

seen before (883a) treated sears, int'ed and entire (existed) in his grammar. Of the remaining three benefits I are a store can serrely be the fit subject of a theoretical to time. Hence cama (specificamb) aline was left without treatment in the Astidhy of Son Panin, who unterfield to I ald up his great Sability Course, the Vyslation Vedings, ' on'l not terry naturally think of leaving earns without any to sto on! This is probably the mass who he wind the P4 which is as it were a companion to his famous grammar

31. It may now be asked why Penner wrote the PS in metre and not my measures. We very think that such a question is not difficult to answer. Considering the simplicity and shortness of the subject to be treated I'mm, it may be assumed, adopted in case of the Siles the metri detate which for the Attidhtive with its corn'es subject matter would have been quite unfit.

Non-this being progressly critain that the PS as re-35 constructed here, is from the limited Panini were there much idea about the age of the work. But as the PS recens to offer some fresh data for this purpose we shall discuss below a more points of view on Panim's age and try to suggest some time in which the crest Indian erimentum was liken to have flourished. Physia has variously been placed between 500 B C . 100 B.C.! The rick of these who hold that Panini should be placed in about 350 H.C. should be considered first.' Their main argument against an earlier date is the lact that Panini

used the word yavana which they think could not have entered India before Alexander's invasion. But this argument has been very ably refuted by Professors S. K. Belvalkar and H. Sköld -Belvalkar, Systems of Skt. grammar, pp. 15 ff.; Sköld, Papers on Pāṇini, pp. 24 ff.). The latter has shown very conclusively "that old Indian yavana must have entered this language before 520 B. C., and there is no reason at all to locate Pā ni ni as late as after Alexander the Great on account of the herequoted sūtra." "Moreover Prof. Liebich has proved that Pā ni ni's rules apply to the language of the Brāhmanas, some obsolete (perhaps archaic) forms only separating his language from that of the Brāhmanas (Papers on Pānini, p. 38)." On the basis of this finding of Prof. Liebich, Prof Sköld thinks that Pānini must have belonged to the latter Vedic period of the Indian literature (loc. cit.). Prof. Liebich however is not willing to assign Pāṇini to a period before Buddha (Pāṇini, p. 8; Winternitz, Vol. III. p. 383). But he seems to have been overcautious in the matter. For he himself admits, according to Prof. Sköld, that Pānini seems to be less lax than that of the Sūtras (op. cit., p. 41.)1 Prof. Sköld concludes on the basis of this view of Prof. Liebich that we could be inclined to place Pāṇini in a period shortly preceding the Sūtra literature proper (loc. cit.) Now the sutra works which are considered to be among the oldest have been placed in 500 B.C. (Macdonell, India's Past, p. 136).

36. From the above discussion it appears that Pāṇini was most probably earlier than 500 B.C. And there seems to be other facts too which seem to corroborate this view. For example the Aṣṭādhyāyī which mentions the Brāhmaṇa literature no less than four times (II. 3. 60; IV. 3. 66, 3. 103; V. 1. 62) and distinguishes between the old and the new Brāhmaṇas, does not refer to the Āraṇyaka literature though the word 'āraṇyaka'

<sup>1</sup> Keith on the doubtful anthority of Pāṇini, VI. I. 157, concludes that the grammarian knew Pāraskara the sūtrakāra. His views about Pāṇini's acquaintance with Kātyāyana the Śrautusūtrakāra, and the Kauśika sūtrakāra also seems to be inadmissible. (Translation of the Yajnrveda, p. clxix.)

he sense of "forest dweller", has once (IV 1, 129) been menel. That Katyayana composed a Varitika to extend the use he word 'arapyaka' to an adhadaa (most probably of the hingma) may be taken to mean that in Planine's time the avaka appendices to the Brahmanas were not set written or a if they might have been written they were not styled as the nvikas. Now according the second alternative as being more ly we can place l'anini at the close of the Brahmana period ng with the we should made another fact, riz., the non-occurce of the word 'approved' in the sense of "secret instructions" religio-philosophical texts containing them in Panim's Astiavi (Panini, 1 4, 79, indeed has the word 'unanisad in the apound upanisathetea)? which literally means 'enting very w to . i.e., in a private manner. Now ne may well conclude t the Arnovskis which contain Upinisals were not old at time of Panni, for they were not yet known as Ironsakas I'mnisads. Now the oldest among the Upamands are conered to have been compiled about 500 B C.' Hence we add not place Panni later than 500 B C. It is likely that nini lived some time earlier than this . The diphthongal chater of e and a which Panini his recorded in his Sike) (13) ows that the language described by him was in the same stage evolution as the Old Person of the Cancilorm Inscriptions 10 B.C.) of Persepolis. For this latter language too has doubongs corresponding to our e and o (see Meillet, Grammaire du eux Perse, pp. 55 ff.). As we have no Old Persian Sik-1 we do t know what the actual phonetic value of diphthongs of (Skt c) d au (Skt. o) was. It is likely that the graphic system was ead of the phonetic development. The fact that Paping has

<sup>1</sup> Cf. Keth Tr. of Ye, grande, HO9 . p claru.

<sup>1</sup> Dargepts, or, cif . p 31

<sup>4.</sup> Dr. Paul Thiome seems it apport so his conclusion in his following remark. "Ph.
is grammer must have been composed at a time when the language of the North was yet,
to be necessary" (ep. et. p. 81)

given rules in his grammar of the proper accentuation of the bhāṣā words (VI. 1. 181, vibhāṣā bhāṣāyām; VIII. 2.98, Pūrvaṃ tu bhaṣāyām) shows that the current language of his time was much ahead of the classical Sanskrit (which has lost its accents) and was nearer the Vedic phase (though in its very late form) of the Old Indo-Aryan than the latter. In addition to this we should also reckon the fact that Pāṇini's grammar was originally accented like a Mantra or Brāhmaṇa text (vide ante § 26) and as such it should be assigned at the latest to the close of the period of the Brāhmaṇas.

#### COMMENTABLES TO THE PS.

37. The Sil 13 Panula. The MSS, and the printed text from which the present edition has been re-constructed have been described before (§ 26) in connexion with the text of the Par reconsion of the PS. We are now giving below the main firstures of the commentary reconstructed. The PA1 recension of the PS. as we have seen before (§ 26) came into existence between 600 and 1100 A.C. Hence the Panisha stell may be tentatively placed somewhere in the 12th century. Thus the work which may be as old as seven centuries is sure to contain some old materials. Some of these, such as a reference to Audayran, has already been pointed out (§ 2b). These materials will be discussed below. According to the Panniks, the Siksa is the seience by which the propuneration of speech-sounds is learnt (Sil syste nays corroccaranam ili Sil 13, p 8, lines 3-4). This is to be compared with the term ramasilya occurring in the RPr. (MV. 30). It is not possible that the author of this work has referred by this term to Pratisaking and this being the case carnotility relates to the Siles of the carly period when it still lucked the later elaboration as observed in the Pratisakhyas (see §§ 16, 23) Hence the RPr. has scarcely any legitimate claim to interpret this word as 'Pratistkhya', which must have existed considerably earlier than the time when the RPr. was compiled. The Palitka in the definition of Siks's quoted above seems to have preserved this tradition which agreed so well with the fact that the PS deals merely with the atterance of the speech-sounds of the Old Indo-Arvan as represented in Vedic texts. Besides this it gives us rare informations on the following points

(a) There are two anusvaras (p. 10, fine 11; p 12, lines 0-10). No other authorities seem to fixed taken notice of this fact.

- (b) A quotation from the Brhadāranyaka Up. (p. 15, lines 22-23) occurring in this commentary varies to some extent from the text of this work as received from Sankarācārya.
- (c) In the reconstruction of the PS. 13 this commentary has given a valuable hint (see p. 18, lines 6-7). From this hint we may assume that the author of the Panjika had PS. 13 as reconstructed by us. But he however could not rightly explain this passage.
- (d) It gives us the old name for anusvāra as anusvāraķ nāsikyaķ (p. 18, lines 12-13). For details about the anusvāra see Note 27.

So much for the importance of the Panjika. In spite of its valuable aspects it should not be considered infallible. It has the weakness of average commentaries of Skt. and Pkt. works. Sometimes it gives information and explanation which are not accurate. For example, the Panjika considers prayatna as twofold in spite of its Siksā text (see p. 14, line 13). It is possible that he failed to understand the passage (18) properly. The same appears to be the case in its determination of the quantity of the component parts of e, o and ai, au (See p. 18, lines 6-7; and Note 23). The author of the Panjika is ignorant about the authorship of the PS. which it considers to have been written in conformity with the teaching of Panini. In this he simply believed what was given in the first couplet (Pāṇinīyam matam nathā, of the Pñi, version of the Sikṣā). This however weakens the testimony of the author of the Siksā-Prakāśa commentary, who considers that Pingala, the younger brother of Pāṇini, was the author of the PS. (p. 23, line 8).

37. The Sikṣā-Prakāśa. This commentary has been received in corrupt MSS, at least the two we could directly or indirectly use are such (see § 2 c). It is inferior in worth to the Panjikā discussed above. But it has importance in the following points:

<sup>1</sup> The corruption is most palpable in the passage at p. 26, lines 22 ff.

- (a) It receives the authorship of the PS to Pingala, the younger brother of Panini (see p. 23, fine 7). The authenticity of this information has been discussed before (§23)
- (b) It defines the Siksian a science for the utterance of (proper) pitch (of vowels) and speech sounds in a nearl (Sile) strategrame certain Anterior p. 23, line 15). This is different from the definition given in the Profit (see §37). Apparently slight though this definition is, it is not without importance. In the Profit's definition we find speech sounds only as subjected instruction while in the Prakt's start (pitch accent) comes in. It may be assumed that the two definitions point to two distinct traditions living their origin in two discounts came first of all to be studied and the pitch received attention fater or at least was treated in a first a later (see also §12).
- (c) In the reconstruction of the PS 13 this commentary gives valuable help. Though the MSS are defective on this point the original reading of the practice before the author of the Praketa can easily be guessed from them (see p. 71 line 16).
- (d) This commentary ascribes to the Belandderats of Saunaka the following couplet error error kerron mitra riningogarthom (?) era ex, manteum partisamtinena redularyum pade pade (p. 21, lines 6-7)
- 33 Of the two available commentaries of the PS, the Sikst Pahjika seems to be the earlier because it is written in a simpler style and has better nequiantines with the old phonetical traditions. The first point will be clear to any one who will compare for himself the language of the two commentaries. And to substantiate the second point we shall refer the treatment of the Anguara. About the exact manner of its pronuncia tion there is difference of opinion among appealists in the Indo Aryan linguistics (see Wackeringel, I §§223 224). Whitney understands the phonetic value of the Anguara which is nothing but the massl yould (T. Pr. 2.30, JAOS, Vol. 10, p. 1888).

Mem. Soc. ling. 2. 194 ff. ref. Wackernagel). But Wackernagel and others do not accept this. After a fresh examination of the various Prātišākhya passages together with the opinion of PS. on this point we find Whitney to be right. The Anusvāra is nothing but a nasalization of the preceding vowel. The fuller name of the Anusvāra was Anusvāra-Nāsikyah or Anusvārah Nāsikyah, a post-vocal nasal or a nasal vowel. It has sometimes been called simply Nāsika or Nāsikya too. That the name Anunāsika, which according to Pāṇini (I.I.8) means only nasal stops, has been used to indicate nasal vowels for a pretty long time, seems to have been due to a misunderstanding (more about this point in Notes to the PS.).

39. Now the anonymous author of the Sikṣā-Pañjikā seems to have been fully aware of the true nature of the Anusvāra. Hence in his comment on Pñj. 17 (PS. 14-15) he quotes from Audavraji an entire passage enumerating the Ayogavāhas as follows:

ष्ययोगवाहाः ष्यः दित विसर्जनीयः ४ दित जिह्वासूचीयः, ४ दित उपधानीयः ष्यं दत्यनुखारः नासिकाः दत्ययोगवाहाः ।

This passage occurs in the-first Prapāthaka of the Rktantra (ed. S. Sastri, p. 2, ll. 11-12) with the difference that the latter reads हुनियन्नासिकः (v.l. हिनियन्नासिकम्, व्नासिकः). In view of the fact that the Rktantra mentions अनुसारो not much later, and अनुसार as one of the Ayogavāhas, it is evident that the extant Rktantra is corrupt in the passage हुनियन्नासिकः. The reading अं द्यनुसारः नासिकः surely goes to the Ur-text of the Audavraji¹ which must have been partially included in his work by the author² or the Vṛttikāra or the Rktantra.

But some of the other quotations in the Panjika from Audavraji are corrupt. (See below.)

Audavraji who has been mentioned in the sutra 60 of the Pktantra can scarcely be its author. The first Prapathaka which is not counted as an integral part of the Pktantra by the MS. B was in all likelihood a part of the original work of Audavraji (see ed. S. Sastri, Introduction, p. 34).

40 Thus it appears that the author of the Pañjika flourished at a time when the original work of Audavraji was still available in a more or less correct form and in fact he may be older than the Vittik in of the Ratintra who appears by no means to be modern. Thus apart from offering a help in solving certain problems connected with the text of the PS (see Note) the Siksa-Pañjika has importance on account of the information it gives about Audavraji, who has been mentioned, as far as we know, in four other works—the Naradija Siksā (H 8 5) and the Siksa-Prakasa commentary to the PS and the Vamsa Brabmana of the Sama Veda (Ind Stud IV, pp 374 386) and the Ratantra (S 60)<sup>1</sup>

Some of Audavraja's passages eited in the Siksa Piñith i occur in the Ritantra with its vriti and some occur in a distorted manner and some do not occur. Let us quote them below in a classified manner.

- (a) Occurring in full
- ध अनन्यान्तर्सयोगे मध्ये यस: पूर्वगुण: (RT 2 14)
- ा सृष्ट करण सर्यानाम् दु स्पष्टमन्त स्थानाम् (RT 3 1)
- ाः पतुसारी यं पा रत्यतुसारी, प्रस्त होवीं दीवीं दुस्तो वर्णी: (RT 2 14 15)
  - (b) Occurring with different readings
- 1 हो नादानुप्रदानी (cf RT 3 3 नादानुप्रदाना) The correct reading seems to have been हो नादानुप्रदानी।
- ग्रा समी वर्गस्य समीयहणे च भीयन्। वर्गस्य प्रहणं स्थानिष्यत्विष्याधिकारः, et समी भीस्य ॥३॥ समीवर्गस्य प्रषण विभीयम्। स्थानिष्यत्विष्यधिकारः (BT 7 1 2) Tho R I reading seems to be correct
- 222 प्रयोगवाहा. घ. इति विसर्जनीय म्य इति जिह्नामूनीय भ्रव इति उपधानीय प्रं इत्यतुस्वारः नाविक्य इत्ययोगवाहा (Diff with RT shown above)

<sup>1.</sup> The very fact that il e Pafijika does not quote from any of the Lite S kga works except the Natal ya S kgā probably show that these latter are latter in or g a than the Pajikā or at least they mere nout yet conside as an last ty at six time. From this fact also we may issume the old uge of the Pafijikā.

- iv. श्वासोऽघोषाणां त्रतीयात् प्रथमानासुभावघोषश्वतुर्थानां युग्माः सोषाणम् (Cf. श्वासोऽघोषाणाम् । तनीयान् प्रथमानासुभौऽचतुर्थानां (RT. 3. 3) also युग्साः सोषाणः ॥६॥ (RT. 7. 10).
  - (c) Not occurring.

# i. निमेषकाला माता स्थात्।

Besides Audavraji the Panjikā has laid the following works under contribution: Aitareya Brāhmaṇa, Sruti, Chāndogya Sruti (Upaniṣad), Pāṇini's Aṣṭādhyāyī, Uṇādi Sūtras, Bhagavad Gītā, Patanjali, Manusaṃhitā, Ŗk-Prātiśākhya, Nāradīya Sikṣā.

- 41. In spite of its importance discussed above the author of the Panjikā seems to have misunderstood the PS. very much; for example, his explanation of PS. 13 (=Pnj. 15) may be cited (see Note 23). But in this matter he seems to have been misguided by Uvaṭa¹ if the latter was his predecessor, or both he and Uvaṭa born long after Panini, when the Middle Indo-Aryan speech-habits had already overwhelmed to a certain extent the purity of the Phonetic tradition among the Vedic priests, have independently failed to explain correctly the difference between e and o with ai and au respectively. Other features of the Panjikā have been discussed in Notes.
- 42. The Sikṣā-Prakāśa or the Prakāśa does not seem to be a very old commentary to the PS. Some points regarding its date have been mentioned before. The Prakāśa quotes verbatim a passage (p. 23) from Viṣṇumitra's commentary to the Rk-Prātiśākhya. Now we do not possess any definite evidence about the time of Viṣṇumitra. The fragment of his writing prefixed to the available MSS. of Uvaṭa's commentary to the RPr. shows that he enjoyed some popularity among the Vedic priests and hence his fragment was saved from oblivion by putting it at the beginning of Uvaṭa's work. Thus we may assume that Viṣṇumitra was not later than Uvata (11th century A.C.)

<sup>1</sup> Uvata (on VPr. I. 73) is right so far in his analysis of ai and au, a-element of both being taken as equivalent to a mātrā, but his remark अनेनेन झानेग एकारी व्याखाती is not clear and the view of unpamed authority (kecid) quoted by him is misleading.

This gives us the upper limit to the Prakāśa; the lower limit is to be had from the author's conjectural identity with the commentator of the Pingalacchandah-Sūtras. This is 1300 A.C.

43. This commentary (Prakāša) quotes from Pāṇini, Yāska, Nāradīya Sikṣā, Gautamī Sikṣā, Saunaka, Patahjali and Audavraji. The only quota tion from the last authority eccms to be taken not from any original work of Audavraji but from some author who quoted him. The case with the author of Panjikā was different, for he quoted as much as he could (see before). The fact that the Prakāša does not quote any of the late Sikṣās except the Nāradīya and the Gautamī Siksā probahly shows that it is not quite modern.

## THE PĀŅINĪYA-SIKSĀ

With Translation and Notes (Critical and Exegetical)

### THE PĀNINĪYA SIKSĀ

WITH TRADSLATION AND NOTES (CRITICAL AND EXPORTICAL)

[alum] plAT coAT arawel Living at 40 loof Kingananan mighillish gladladdag, plagadadag Lhaplachadhillicitatar Lapay, laganet bal.]

Norm I. The Varua-samaumaya (or the executed Sixa-rutras) whether it was composed by Panim or any of his predecessors was in all likelihood an exemital part of the PS, and constituted its leginning, for prayablers like ac, you far, etc., have been used in that wark. But there being no direct evidence about its assumed place in the PS, we have put it within square brackets. (For detailed the renors on its age and authorship as well as other punts, see introduction, §§ 12-15).

Note 2. The Phy., Prk., Yap and Bk recensions begin with the three following couplets:

Alla fiking parakydan Panadyasi natan yalla p Ditrimipangan (11 ci fyd y gill (king lod inc liy d v (1) Peni Hami api kid bletham orgittam aba Habbha p puna nyikili nigyimi eden nederne cidhim v (2) Trisayli ciduk-pajir nd rumb rambhardo mildh p Palkite Samkjite cipi senyan problad Senyambhard v (3)

Tr. Now I sha'l gave out the Skip according to the views of Panni in pursuance of the tradit and lose, one about I learn it with reference to the popular and the Velor languages. Though words and their meaning are well known, yet these are not within the known-dge of persons intellectually deficient, (bench I shall dwell once more on the rules regarding the pronunciation of words. That speech sounds in Prakrit and Sunskrit are sixty-three or sixty-four, according to their origin, has been said by Brahman (Sveysambhū) himself. [1-3].

- The expression Pāṇinīyam matam yathā agrees with the following which occurs later on in all recensions (except the AP.): Samkarah śāmkarin prādād Dāksīputrāya dhīmate. It appears that the compiler of the AP. did not know who the author of the PS. was. For, though in the introduc tion of his metrics (ch. 328 AP. ed. Anandasrama) he writes: chando vaksye mūlajais taiķ Pingalôktaņ yathākramam he is quite silent about the source of the Siksā given by him It is not so much likely that Pāṇini like later authors would put in his own name in his work, for in his Astadhyayi too he does not mention himself. This ignorance of the compiler of the AP, along with the defective nature of the text of the PS. as given in his work probably goes to show that at his time (c. 800 A.C.) the PS. was not a frequently studied work. The Prātiśākhyas which are later than PS. must have supplanted it to a considerable extent at that time. That the author of the AP. leaves out as many as six hemistichs out of eighteen couplets shows the damaged condition in which his material had already reached at the time of the compilation of the AP.
- b. The expression tri-ṣaṣṭiś catul-ṣaṣṭir  $v\bar{a}$  shows how the author of these spurious verses felt a difficulty over the meaning of the first two couplets of the PS. and could not say for certain whether 63 or 64 letters were meant by Pāṇini. Kauṭilīya Arthaśāstra (c. 300 B.C) knows only 63 letters (see ed. Jolly, II. 9.14). The AP. contains none of these couplets except the first half of the third in the following form: vakṣye śikṣām triṣaṣṭih syur varṇā vā catur-adhikāh. It is evident that the compiler of the AP. too felt a difficulty over first two couplets of the PS. It cannot be ascertained whether the authors of the other recensions have imitated the indecision of the AP. in this matter or independently had their own confusion.
- c. The expression  $Pr\bar{a}krte\ Samskrte\ c\hat{a}pi$ , scarcely older than the AP. (c. 800 A.C.), has sometimes been erroneously referred to as the earliest mention of the names of Sanskrit and Prakrit languages (e.g. Hari Narayan Apte, Wilson Philological Lectures of 1915, Poona, 1922, p.5).

Svarā viṃśatir ekaś ca sparśānāṃ pañca-viṃśatiḥ \\
yddayaś ca smṛtā hy aṣṭau catvāraś ca yamāḥ smṛtāḥ \(\mathbf{n}\) (4)

Anusvāro visargas ca xa-φau cápi parásrayau l duḥspṛṣṭas céti vijñeyo ļ-kāraḥ pluta eva ca II (5)

Tr. Vowels are twenty-one, stops twenty-five, the group beginning with ya (i.e. semivowels, sibilants and h) eight and yamas four; anusvāra, visarga  $\chi$  and  $\phi$  are dependent on others and the pluta 1 is duhspṛṣṭa. [4-5].

Note 3 The order in which the different groups of speechsounds have been mentioned seems to be due to exigency of metre. The twenty one youch according to the commentaries, the Pahikh and the Prakish are 1, 5, 3, 1, 1, 1, 1, 1, 0, 0,

The earliest enumeration of vowels has probably been in the so-called Sixi sutris. But there we have only nine vowels, long and pluta ones being allogether omitted. The omission has been discussed before (see Introduction, § 14). The Pritiality are not in agreement with one another as regards the treatment of vowels. The following is a tabular statement of vowels recognized in the extant Pritiality as compared with the vowels of the PS.

Table I

						_	_		, .					_						•

The APr second of to the commentary does not include the plate rowals in the Varpa-semiantlys but similar resistence in the Atheras Nets (1 (\*\*C)). It is possible that the plate courts encount into interaction of this Nets.

In L setumers in a from the Usata (eg., co [0] of 1 10] does not mention plots ones though the [0] of recognizes them (see I 16: 10 22 std.) In the [0] of 1 (also keg I 7) does not empty the full states of a sowell for it can stand to then at the leg noing nor at the end (1 2, 11).

<sup>1</sup> The commentaries to the Tir do not recognize pluts variety of ; ; and diphthongs

<sup>4</sup> This connection is second as to Uests. For the view on RF, rowels see Note 2 above The first seven chapters of the VF ere game is The last (VIII) chapter seems very much to be a bias composition (see Weller Ind Rtn1 Its.p Co.) Hence by VF we shall indicate the first seven of apters and the clapter VIII will be designated by the name tab VFr or VIII.

<sup>5</sup> The view of the UT as regards the number of vowels it recognises has been gathered from its ratio which might have been built on Andares as work (see introduction 10). The recognition of a long i by the UT is carlons. 13 and other 1 ritisfathyses do not accept this.

The difference between the PS. and the Prātiśākhyas is due to their originally different character, for the former was a manual for helping the recitation of all the Vedas or it may have belonged to the one undivided Veda that existed at the very beginning (see Introduction, § 18), while the latter (the Prātiśākhyas) were treatises related to the peculiar mode of reciting or chanting one particular Veda, or its many recensions (tatra sarvaveda-sādhāraņī śikṣā...Pāṇininā prakāśitā, pratiocda-śākham ca bhinna-rūpā prātiśākhya-samjñitā anyaireva munibhih pradarsitā. Prasthāna-bheda, Weber's Ind. Stud. I, p. 16). The fact that the PS. was accessory to the study of all the Vedas, required that it should be a treatise of general kind and in this respect differs from the Prātiśākhyas which related to one kind only of the mantratext in its different śīkhās. Hence we find the Atharva and Rk Prātiśākhyas omitting from their treatment of vowels the pluta ones which probably arose late in the recitation of their respective mantra-texts. The TPr. includes pluta a, i and u in its treatment of vowels while the diphthongs (e, o, ai, au) as well as r and I have no pluta variety in it.

Note 4. Yamas are said to be particular nasal sounds occurring before the nasal stops when plosives precede them. The enumeration of yamas as four in the commentaries appears to be a bit puzzling; for, according to the definition of the Prātiśākhyas and the Nār. S. the yamas become 20 or 21 in number (see APr. I. 99; TPr. XXI. 12, XXII. 12; RPr. VI. 8). Uvața in his commentary of the RPr. has a defence for both the enumerations. He sums up his first discussion, with evam viṃśatir yamā bahv-ṛcānām bhavanti sva-rūpaiś catvāra eva tad uttaratra yama-lakşane vicārayişyāmah (on I. 20) and in discussing the character of yama (on VI. 8) he says tasmād iha 'sparšā yamananunāsikā' ity ucyamāne viņšatitvāt sthāninām ādešānām api yamānām vimsatitva-prasangah; sa mā bhūt. caturnām eva yamānām prathamāh prathamam dvitīyā dvitīyam pañcamād āpadyerann ity ucyate. The sum and substance of what Uvata says seems to be that in pronunciation the yamas do

not partike of the characteristics of their respective groups to any considerable extent, hence they are to be called the first yama the second yama and so on, making the yamas four in number But the Baby reas however thought otherwise and give an extremely logical interpretation to the definition of the Pratisaklya without earing for its practical aspect (Whitney has a difficulty over the nature and number of the yamas see his comments on APr I 99 TPr II 51 XXI, 12 XXII 12 A great deal of his difficulty is due to the peculiar nature of the TPr) The late Vaj Pr 10, its ch VIII (29) has recognized four yamas only though curiously enough Uvata explains their number to be twenty In the Rikantra also (ed Burnell p 2) only four yamas have been recognized (For more information about yamas see Siddheshwar Varmas 'Critical Studies, pp 99ff)

Note 5 Anusvara All the Pratisakhyas except the Rktantra have recognized one anusvira only. The Pahijika as well as the Prakasa recognizes a reading anusvaran according to which two anusvaras are available. In this matter the Pahijika invokes the authority of Audavraji. But the recognition of two anusvaras seems very much to he a late development and did not find favour with the majority of early Vedic phoneticians (Saiksikas). It is possibly the author of the spurious verse tri sastis catuh sastir va etc., that has first honoured the view of Audavraji in connection with the PS

Note 6 Duksprstah The pluta I has heen called the duh sprsta or 'touched with difficulty This may be one of the reasons wby some Pratisakbyas did not recognize this sound (see Table I) But the PS being meant for all the Vedas had to notice this It should be known that the commentator to the RT recognizes this (see ibid) Weber was inclined to understand duhsprsta as a nasikya (Ind Stud IV, p 349) But his view seems to be untenable The Panjik on the authority of Audivrajitakes it in the sense of isat sprsta (p 11) For according to the latter I partakes of the character of semivowels which are isat sprsta according to PS See also Uvata on RPr XIII 3

Ātmā buddhyā samarthyārthān mano yunkte vivakṣayā \\

Svarataḥ kālataḥ sthānāt prayatnánupradānataḥ \\
iti varṇa-vidaḥ prāhur nipuṇam tam nibodhata \(\mathbf{(10)}\)

Tr.  $\bar{A} tm\bar{a}$  with buddhi perceives things and sets the mind to an intention of speaking; the mind (then) gives impetus to the fire within the body, and the latter drives the breath out  $\lceil 6 \rceil$ .

The breath circulating within the lungs creates the soft (mandra) tone; this is connected with the morning offering (prātaḥ-savana) and rests in the Gāyatrī (metre) [7].

(The same breath circulating) in the throat (produces) the middle (madhyama) tone and relates to the midday offering (mādhyandina-savana) and follows the Tristubh (metre); and the shrill (tāra) tone (which is produced by the breath circulating) in the roof of the mouth relates to the third (i.c., evening) offering (of the day) and follows the Jagatī (metre) [8].

(The breath which is thus) sent upwards and is checked by the roof of the mouth attains to the mouth and produces speech-sounds (varnas), which have a fivefold classification—according to their pitch, quantity, place of articulation, the primary effort and the secondary effort. So said those who were versed in (pronouncing) speech-sounds. Learn this carefully [9-10].

Note 7 Pratah savanayagam Tho Antoroya Brālimana has the following atha mandram tapati tasmāt mandraya vāca pratah savane šamset (AIV 6)

Note 8 Sirianyam This is a form allowed by Pinini, in his grammer, for the Chandas only (stranyams chandas), VI 1 60) By Chandas the grammerian surely meant the Vedic language as opposed to the current language of his time. There is nothing peculiar in his use of the Vedic language in the Sika, which is a Vedänga (see also Notes 9 and 18 helow)

Note 9 So diriah The peculiar sandhi observeable here sah+udiriah) has been supported by Papini (so ci lope cet padapuranam VI 1 134) According to the Kakikā this sutra relates to the loot of a Rk (tha Rk pada era grhyate) Hence this also is an indication of the archaic language of the PS (see also Notes 8 and 20)

Note 9 Varnan the speech sounds (see Note 14 below)

Norr 10 Janayate The use of Atmanepada in this verb as opposed to that of Parasmaipida in PS 4 deserves to be noted But the menning in both the cases is almost similar

NOTE 11 Searatah The word stara in this place means pitch recents, such as uditta, mudatin and svarita. The translator of the Chindogyn Upnisad in the S B E series once translated this word as 'svilable (1 4). This is indefensible

Note 12 Prayatna This word means 'primary (pra = forward) effort (yatna) Patuiyali, however does not seem to ho willing to allow such an interpretation (on Panini, 1 1 9, ed Kielhorn, \oldol 1, pp 61f) But as he has objected to it from a different stand point we can well have our interpretation. For in articulating speech sounds, first of all we adjust the different parts of the mouth. This adjustment as opposed to setting the vocal chords to action (which has been termed as anupradana) has heen

<sup>1</sup> For a search ng enquiry into the meaning of Chandas is used by Papini see Dr. Pau I. Thieme s. Papini and Veda. Aliababad 1935 especially pp. 67ff.

justly called prayatna. This prayatna is included in the asyaprayatna of the Aşţādhyāyī (I. 1. 9). Āsya in this work means 'the place of articulation (sthāna) in the mouth' (āsya). The use of āsya instead of sthāna has been meant for brevity (lāghava): prolixity should always be guarded against in a sūtra. prayatna in āsya-prayatna has been identified with the ābhyantaraprayatna by Bhattoji-dīksita (on Pānini I. 1. 9). According to him it is of four kinds: spṛṣṭa, īṣat-spṛṣṭa, saṃvṛta and vivṛta. As opposed to the ābhyantara-prayatna, he has bāhya-prayatna, which is another name for Pāṇini's annpradāna, which according to Patañjali consists of the following: vivāra, samvāra, śvāsa, nāda, (ghosatā, aghosatā)<sup>1</sup>, alpa-prāṇa and mahā-prāṇa (on P. I. 1. 9) Kaiyyata adds to this three more: udātta, anudātta and svarita, and Bhațțoji follows the latter in this matter (S. Varma, op. cit., p. 9). The use of two different sets of derivatives of the root vr (such as samvṛta, vivṛta and samvāra, vivāra) in the classification of both kinds of efforts is not happy. Nevertheless it can be justified; for in the case of the ābhyantara-prayatna, the root vr relates to space between the two parts of the mouth, which touching or coming very close to each other, produce speech-sounds; while in the case of the bahya-prayatna, it relates to the vocal passage where vocal chords are situated.

The fact that Patañjali and his successors use ābhyantaraand bāhya-prayatna instead of simple prayatna and anupradāna demands some notice. A change of practice in this matter probably points to the advance of phonetic studies which evidently took place during the time that elapsed between Pāṇini and Patañjali. Some of the early Prātiśākhyas such as the APr. and TPr. were written in this period (see Introduction, §24).

<sup>1.</sup> Ghosatā and aghoṣatā are simply synonymous to nāda and śvāsa respectively. Later grammarians however have taken ghoṣatā and aghoṣatā as something other than śvāsa and nāda. Evidently a marginal gloss crept into the Mahābhāṣya as early as Candragomin (c. 600 A.C.), who in his Varṇa-Sūtras has imitated this in using expressions like nādānupradānā ghoṣavantaḥ and [a]-nādānupradānā aghoṣavantaḥ. The mistake involved in the superfluous use of terms has been detected neither by Candragomin or any of his successors like Kaiyyaṭa or Bhaṭṭoji-dūkṣita.

Pritifikhyas very rarely use the terms prayatua and anupradina The APr never uses prayaton, but unpurading is used in it once (I 12) In the RPr each of these terms occurs once (\IV 10 . \III 1) In the VPr prayatra occurs once (I 43) and anupradana never TPr coins a new word larana for prayatna (II 32, 31, 15, XXIII 6) and uses prayatna once (VII 6, 7), but in the next necession (XVIII 2) uses for it the word karana ringua (admistment of different articulating organs) Other Pratisakhaas too use the term Larana (e q , APr I 18. VPr 1 75, RPr VI 8) Whitney a translation of prayatra simply as effort is vague Weher's translation of the word as 'Mundbewegung is however more accurate. Anuprading is twice used in the TPr (II 8 , XXIII 2) The disuse into which prayatna gradually fell seems to have enused the substitution of its radical sense 'first effort by the more generalized sense 'effort' which without my adjective did not distinguish between the primary (abhyantara) and the secondary (bahya) efforts As unambiguity and precision of terms is an essential condition in scientific discussion the post Paninian phoneticians almost gave up the old terminology and had new terms like abhuantara prayatna and bahya prayatna for the simple prayatna and anupradana respectively

Note 13 Anupudana Tho term as we have seen above is equivalent to 'after effort or 'secondary effort, which means stiffening or loosening of vocal chords. Whitney translates this as 'emission (APr. I. 12, TPr. \all III. 2) and Weber has rendered it by Ausstossing (Ind. Stud. IV. p. 107). Dr. Siddheshwir Varma translates this as 'souno material', or breath voice material (op. cit., pp. 3. 9) but such translations though not altogether incorrect are not happy. Whitney. Weber and Varma all seem to have missed the etymological implication of the word. The author of tho Sil as prakasa however extends the meaning of anapradam which according to him includes masality too (p. 29). This evident innovation seems to have justification from the separate mention of anunasiakas in PS. 17b. (Por other points regarding this word see above the Note 12 on prayatia).

Note 14. Iti varṇa-vidaḥ prāhuḥ. So said those who were versed in the lore of (pronouncing) the speech-sounds. This evidently shows that there were other masters of phonetics (Saikṣikas) before Pāṇini wrote his Sikṣā. This hemistich does not appear in the AP. It is possible like the PS. 14 it has been left out (see Note 28 below). Varṇa also means a 'written sign' representing a speech-sound (see Th. Goldstücker, 'Pāṇini: his place in Skt. literature', London, 1861, pp. 34ff.).

The theory of producing speech-sounds as given here recognizes three principal places of articulation: chest (uras), throat (kaṇṭha) and the roof of the mouth (śiras). Patañjali too while explaining catvāri śṛṅgā, etc., interprets tridhā baddhaḥ as triṣu sthāneṣu baddhaḥ: urasi kaṇṭhe śirasīti. (ed. Kielhorn, Vol. I, p. 3)

From the fivefold division of speech-sounds mentioned in the PS. 7 we may well expect that each class of sounds will be discussed next one after another. But authors of the inflated versions such as Rk., Yaj., Pñj. and Prk. recensions without paying any heed to this fact have interspersed passages (treating five divisions) with couplets from different sources.

Udāttas canudāttas ca svarītas ca svarās trayaḥ l hrasvo dīrghaḥ pluta iti kālato niyamā aci ll (11)

Tr. There are three kinds of (pitch) accent: udātta, anudātta, and svarita. Among vowels short, long and pluta varieties are distinguished by their time (of articulation) [11].

Note 15. Aci. Ac meaning vowels is a pratyāhāra of Pāṇini. The Yaj. recension reads PS. 8 as its 23rd couplet.

NOTE 16. The Prk., Yaj. and Rk recensions read the following couplet as the 11th, the 14th and the 2th respectively:—

Udātte niṣāda-gāndhārāv anudātta ṛṣabha-dhaivatau  ${\tt I}$  svarita-prabhavā hy ete ṣadja-madhyama-pañcamāh  ${\tt II}$  (12)  ${\tt II}$ 

12. Of the seven musical notes niṣāda and gāndhāra can arise in the high pitch (udātta), ṛṣābha and dhaivata in the low pitch (anudātta), while

sadja madhyama and pancama have their source in the medium pitch (svarita)

This couplet occurs in the Nar S (I 8 8) and seems to be original to it, for this work belonging to the Sama Veda has a direct concern with an elaborate theory of seven musical notes. Besides this the fact that the couplet has been compased in the Arpa matre while the passages common to all recensions are in the Anustuhh seems to create a presumption in favour of its spurious character with reference to the PS. Its absence from the AP as well as uncertain position in other versions probably strengthens this presumption. Hence this has not been included in the reconstructed text.

Astau sthanani varnanam urah kanthah siras tatha 1 uhva mulam ca dantas ca nasil osthau ca talu ca 1 (13)

Tr The speech sounds have eight places (of articulation) ehest, throat, roof of the mouth (lit head), root of the tongue, teeth, nostril, lips and palate [13]

Note 17 The RPr and TPr do not recognize any puro dental sound and they place most of the dentals at the root of the teeth and according to the RPr urasya (lit from elest) sounds are existent only in the opinion of others (I 18) The other Pratisākhyas admit danta mula as an additional place of articulation (For details see the Table II)

Note 18 The Panirka does not comment on the two fol lowing couplets They seem to be irrelevant in the position they occur in the AP, Prk, Ynj and Rk recensions But they occur in the Nir S (II 5 4 9), Yv S (143 144) and Mand S (107-109) too

O bhavas ca vivrttis ca sa sa repha eva ca i nhva mūlam upadhma ca gatir azta vidhosmanah i 14 i

Yady o bhava prasandhanam ukarddi param padam i svardniam iadršam vidyad yad anyad vyakiam usmanah i 15 i

Tr Usmans (spirants) have eight ways (of development) change to o histus \$ \$, \$ r physmuliya and upadhmaniya [14]

When a word ending in o (out of an  $\bar{u}$ sman) is followed by another word beginning with u, the former should be considered as ending in a vowel coming from an  $\bar{u}$ sman [15].

- a. These two couplets, though probably not belonging to the PS., seem to be very old. On the antiquity of the first (14), see B. Liebich, 'Zur Einführung in die indische einheimische Sprachwissenschaft,' II. § 22. The second couplet is not quite intelligible. Weber is willing to read  $ak\bar{a}r\hat{a}di$  against  $uk\bar{a}r\hat{a}di$  of all MSS. (Ind. Stud. IV, p. 352).
- b. The APr. according to its commentator recognizes four  $\bar{u}$ smans  $\hat{s}$ ,  $\hat{s}$ ,  $\hat{s}$  and h (I. 31). The VPr. (I. 51). has also the same number. The TPr. adds  $\chi$  and  $\phi$  to these and has six (I. 9). The  $\bar{R}$ Pr. has recognized two more: h and m, making altogether eight  $\bar{u}$ smans (I. 10, 12). The reckoning of anusvara as an  $\bar{u}$ sman seems to be very strange.

Hakāram pañcamair yuktam antaḥsthābhiś ca saṃyutam i aurasyam tam vijānīyāt kaṇṭhyam āhur asamyutam ii (16)

Tr. When combined with nasal stops (lit. fifth ones) and semivowels, h should be known (as arising) from the chest; while h not so combined is said to be from the throat [16].

Note 19. This couplet stands in a wrong place in the Yaj. recension, and the Pañjikā has not commented on it. Besides this it is missing in some MSS, of the AP. Still we have considered it to be belonging to the original PS. on the following grounds:

(i) Uras according to the PS. 9 is a place of articulation for some of the speech-sounds, (ii) Indigenous Pali grammarians too have recognized some sounds as aurasa (Pali, orasa sounds; Minayeff, PGr. p. 2; Geiger, Pāli Lit. und Spr., p. 41), (iii) This couplet PS. 10 occurs also in late Sikṣās such as the Lomaśī S. (V.9), the Varṇaratna-pradīpikā S. (26) and the Yv. S. (177). Considering the position of this couplet in these works it does not seem to be possible that it originally belonged to them. The RPr. (I. 18) and the RT (II. 3) too recognize urasya sounds.

Note 20. Antahsthābhiś ca. Its feminine gender creates difficulty in construing this with 'varna' (masc.) or 'akṣara' (neut.)

in the instrumental plural [understood]. This difficulty was felt by some reductor who changed the expression to autapithatic capi. But the genuine original reading might well have been antabathebhic ca, and the late reductor probably finding this Chandasa form unexplainable by the grammar of the classical Ski., which he thought to have been the language of the PS, changed it to autabathabhic ca and brought it within the control of the ordinary grammar, though the new difficulty which arose escaped his notice. The reductor of antabathasis caps made it faultless and removed all trace of the assumed original.

Kanlhyār ahār i-cu-yatās tālaryā oṣthajā ru-pū į syur mūrdhanyā ṛ-tu-ra-ṣā dantyā ṭ-tu-la-ṣāh smṛtāh ¤ (17) Juhrā-mūle tu kuh prokto dantyōṣṭhyo rah surto budhath ¡ c-ai tu kantha-tālacyā o-an kanṭhōṣṭhajan smṛtau ¤ (.&) Ardha-mātrā tu kanṭhya-ya ckārúukārayor bharet ṭ aikāráukārayor mātrā tayor ruṣṭta-saṃrṣṭam # (10)

Tr. A and h are thront sounds; i, cu (i c., c, ch, p, jh and n) and s are paintals; u and pu (i c., p, ph, b, bh and m) lahials; t, tu (i.c., t, th, d, dh and n) and s cerebrals; and l, tu (i c., t, th, d, dh and n) and s are dentals [17].

Ku (i.e., k, kh, g, gb and n) is uttered from the root of the tongue, and v is a denti-labial sound; o and ai are threatpalatal, and o and au are threat-labial sounds [18].

The throat element of e and o is half a mātrā and of ai and au is (one) mātrā; these two latter (i.e., ai and au) are open-close sounds (i.e., their first half or the a-element is open and the second half or i- und u- element is close) [19].

Note 21. At the time of the Pratifithnyas the speechsounds of the Old Indo-Aryan did not all retain the places of articulation which they had at the time of Panini,

probably a later development due to Dravidian influence (See Introduction §§29, 30).

In APr. 1. 41. and its commentator informs us of its articulation.

A Seo APr. 1. 41. and its commentary on the same,

The R Pr. and its commentary on the same,

The R Pr. Br. and its commentary on the same,

The R Pr. Br. and its commentary on the same,

The R Pr. Br. and its commentary on the same,

The R Pr. Br. and its commentary on the same,

The R Pr. Br. is silent about the places of articulation for yowels.

A does not appear in the stitus 5 of RT. but it might be due to the corruption of the MSS. As this sound has not been discussed elsewhere in this work we measure that it arises a late in might be due to the corruption of the

For details of this variation see the Table II in which views of Pratifikhyas have been compared with that of the PS

Among these, typical is the case of r and r According to the Pritisikhyas the first is velar, while they are not minimous about r. But Panini considers r to be cerebral (Suddheshwar Varma, op cit, pp. 6.7). The fact that r and r cerebrahize, according to Pinnii (VIII. 1.1) as well as the Pritisikhyas (RPr. V. 11, 20, NPr. 111. 85, TPr. VIII. 6-7), the dental sounds that follow them, shows that these sounds were originally cerebral, and Panini testifies to the original state rather than the Pritisikhyas which have r as a dental or an algorithm sounds.

Note 23 Cu. It indicates e, ch, j, jh and ü. Appending u to the first sound of the group. (rargar) of stop consonants for indicating all life five members is a Promian device used in the Aslidhydyl (anulit sacranaya capratyayah, I. 1. 69)! Pu, Iu, Iu and lu have been similarly used.

NOTE 23 Ardha matra in, etc. This couplet (PS 13) has suffered very badly in transmission, and its second half does not occur in the AP. Usafa in his comments on the VPr I 73, has wrongly quoted its first half as ardhamitra in lanthasya ail draul drayor. It appears that the sin in display a side and o having lost their diphthongal character in later times? this couplet became immelhigible and gave rise to variants of perplexing nature. Weber's reading lanthasyadil araul arayor spoils the metre, but his conjectural emendation (in translation) of aikāraul ārayor was a very lappy suggestion and finds actual support from the Paūjiks (p 18). His reading madhye e-ai for mātra tayor however cannot be accepted, for it has evidently arisen due to a insunderstanding

<sup>1</sup> li is on lie basis of Fäginie we of profythe or it at Dr laul Tileme makes the abstement that it is selfer dont that the Apishbayi presupposes the 6 rs Suira and the 8 rs Sútras presuppose the Apishbayi (op ct p 109) The PS can well be substituted for the Apishbayi in this remark.

<sup>2</sup> See Note 1 in p Cl

All the sandhyakṣaras¹ being long, consist of two mātrās (RPr. I. 16; VPr. 1. 57; TPr. I. 35; APr. I. 61). Hence from PS. 13 we have the quantitative distribution of the two elements of e, o and ai, au as follows:

NOTE 24. The Rk recension reads the following couplet after PS. 12. This does not occur in the AP. and Yaj. recensions, and none of the two commentaries comment on it. Hence we have considered it to be spurious.

Saṃvṛtam mātrikam jñeyam, vivṛtam tu dvimātrikam ļ ghoṣā vā saṃvṛtāḥ sarve, aghoṣā vivṛtāḥ smṛtāḥ "20"

Tr. A samvṛta (close) sound is one mātrā long, and a vivṛta (ope) sound is two mātrās long; voiced sounds are all samvṛta while breathed ones are vivṛta [20].

This couplet like other spurious couplets discussed above must be a a borrowing from some unknown source. But the substance of the second half of the couplet occurs in the TPr. (saṃvṛta-kaṇṭhe nādaḥ kriyate, vivṛte śvāsaḥ II. 4-5).

- <sup>1</sup> Wackernagel (I. § 32), does not admit that all e and o in OIA were originally sandhya kṣaras, i.r., combination of two vowel sounds. His objection is based on e and o not arising out of actual sandhi in OIA. But the Vedic phoneticians in using the term evidently recalled the Indo-Iranian diphthongal character of e and o such as appears in Av. vacdā (Skt. véda) and Av. zaothra (Skt. hótra), as well as e and o arising from a combination of a with and u respectively.
- The VPr. (I. 76) only among all the Prātiśākhyas expressly recognizes the fact that ai and au have one mātrā for a and one mātrā for i as well as u. From the direction as to the production of ai and au given in the APr. (I. 41) it appears that this latter work too agrees with the PS. But as regards the pronunciation of e and o the APr. expressly says that they have only one place of articulation (I. 40) and hence we are to understand that at the time of this Prātiśākhya, e and o no longer retained the trace of their diphthongal character which we see in the PS. 13. The VPr. is silent about the production of e and o. The RPr. in its attempt to describe their nature simply mystifies the issue (see XIII. 15-16) Hence it appears that the Prātiśākhyas in question are later than the PS.

Norz 25 Next occurs the following couplet in the Rk and the Yajus, recensions and it has been commented on in the Prakasa commentary. But as it appears irrelevant in the present context and contains the term harana which as we have seen before is a term of later origin than Panini (see Note 12) we have considered this couplet to be spurious

Svarānām ūsmanām catva vivrtam karanam smrtam į tebhyoʻpi vivrtāv enau tābhyām aicau tathaiva ca į (21)

Tr Vowels and substants are open in enunciation, e and o are more open than they, and at and an are still more so [21]

Note 26 This couplet like other spurious ones must be a borrowing from some unknown source. The substance of the first half of the couplet is available in the APr unmanam vertain ca staranam ca, I 31 32). But a cording to this Prätis ikhya, e and o a well as a are the most open sounds (alkardukaiger vivrlatamam tato'pyål arasya I 34 35) and not as, su as in the present couplet.

Anustara-yamanām ca nāsikā sthanam ucyate i upadhmānīya üşmā ca phvā mūliya-nāsike i ayogavāhā vijūcyā āśraya-sthāna-bhāginah ii (22)

Tr. Anusvāra and yamus have the nose for their place (of articulation), upadimunīya, ūsman u e, visarjanīya), jihvāmūhya as well as nāsikyas (i e the anusvāra and yamas) are ayogavahas and as such they share the place of articulation of sounds on which they are dependent [22]

Note 26a The hemistich anusvāra yamānām ca etc., does not occur in the Yaj and the AP, recensions (see Introduction § 2) As anusvara and yamas have been mentioned earlier in the PS (1-2) we have to consider this as belonging to the original text

Note 27 Aunstāra The 'anusvāra-nāsīkyah' and 'anusvarah nāsīkyah' seem to have been synonymous and probably the original name for anusvāra by which the TPr (I 34; II 30, XVII 1) understands only a nasrl vowel This meaning of the term was known to the author of Paŭijkā too For he says saram anu bhavatī tiy anusvārah, 'as it arises after the vowel it is (called) the anusvāra' (5)

The term anusvāra-nāsikya has sometimes been shortened also simply as nāsikya or nāsika. But this shortening seems to have created some misunderstanding. For example, in the APr. (I. 26)1 and in the RPr. (I. 20) nāsikya has been used to denote sounds pronounced directly from the nose (i.e. yamas and the anusyāra)2 as opposed to anunāsikas (nasal stops)8 which are pronounced in the mouth as well as in the nose (APr. I. 27 and P. I. 1. 8). But in spite of such an use of nasikya some interpolators and commentators of the Prātiśākhyas have taken anusvāra and nāsikya 4 to be two different sounds (VPr. VIII 525, 27, 29; Uvața on VPr. I. 74; Māhişeya on TPr. I. 18). curiously enough in his commentary to the RPr. I. 20, Uvata has explained nāsikya as the term including yamas and the anusvāra as well as nāsikya. Though the later writers on Vedic phonetics at times differed from him about the meaning of the term anusvara, Pāṇini understood by this a nasalized vowel. For he explains the anusvāra as a nasal sound (PS, 14) and gives directions as to how it should be correctly produced (PS, 15b-16a). The term 'nāsika' which is used to denote a nasalized vowel in the Prātisākhya has also been used in the PS, (14b). Among the western philologists a controversy went on for some time about the correct pronunciation of anusvāra; but

- <sup>1</sup> The APr. never uses the term anusvāra. It is from the commentator that we learn that the nāsikya is equivalent to yama and anusvāra (see Whitney on APr. I. 26).
- <sup>2</sup> Similar is the view of Patañjali. On Pāṇini I. 1. 8, he says atha mukha-grahaṇaṃ kim artham? nāsikā-vacano' nunāsika itīyaty ucyamāne yamānusvārāṇām eva prasajyeta. mukha-grahaṇe punaḥ kriyamāṇe na doṣo bhavati (ed. Kielhorn, Vol. I, p. 60).
  - The TPr. sometimes takes nāsikya in the sense of yama alone (XXI, 12, 14).
- 4 The view that anunāsika is equivalent to a nasalised vowel arose probably from a confusion of this word with a somewhat similarly sounded term ānunāsikya (=nasality) as used in the Mahābhāṣya, yathā trtīyās tathā paūcamā...adhiko guṇah (ed. Kielhorn, I, p 61, fine 18, 29). Pataūjali is clearly against such a view (see Note 2 above). Among the old authorities who seem at times to identify anunāsika with a nasal vowel is APr. (I. 53). But the relevant sūtra has probably been corrapt. TPr. once understands by anunāsika nasal stops and anusvāra (II. 30. See als) III. 129; IV. 3, 9, 13, 51, 90; TPr. V. 26-28, 31; X. 11(?), XV. 1. 6; XXII. 14).
  - 5 Weber considers this chapter of the VPr. as a later addition (opp, cit., p. 65).
- 6 ke te nāsikyāļ? ity asyām apekṣāyām āha nāsikyā yamānusvārāķ (ed. Sāmaśramī, p. 80).

among them all Whitney, in spite of the bewillering opinions of the Pritisakhyas or rather the enum natures of such works, coall correctly guess the true promunication (on TPr. 11, 30) Wackeringel however considered him to be mustaten, and Thumb? did not centure to give any opinion on the matter

Note 28 Craffoning rusmletel: The homestich does not occur in the RL and AP recongous. Still upadh maniva and vising a being mentioned in the PS, 2," we can reasonably expect the treatment of their male of articulation in the Siker Hence we have considered this heroistich as a comme part of the PS (see Introduction, § 26). One of the ser in why it came to be ignored in the RU receiving is probably to be sought in the sarving later nees of the term is man schick in this context surely means visited to the final a prestion price led by a rowel (-h). This term meaning aparen as well as final h occur in the RL Pr. (1, 22 : 11, 1) In the VPr (1 51), the VPr (1 20), the Rktanter (16) as well as in some other part of the RPr. (I. 13) the term steman has been nel to induste assurated stops. It seems that he the eather dedress visares as well as asperted stops, due to their almo ! similar nature, was included in the term usman Panini, however, does not use this term because in his grammar. In prarathers evidently a reed the purpose. By this term the TPr however means s, s, s, h, x and \$\( (I. 9), and curiously enough the BPr also means by the term same sounds in 1, 12; and in the Chapter VIII (considered to be a late addition by Weber) of the VPr we understand by the term &. s. s and h (stira 22, ed Weber)

Noti 29 Ayogardha. This term has been variously explained, and Weber felt a difficulty over its correct interpretation

I Altinized Grammat & Act I ff 277, p 2.7, in the extension of Prof. follors the courses of the Tire is anything but a passioner (see Die Lyden Qikel 1, p. 51)

I Hantbach des Ranekt t. 1 55

This couplet occurs in all the secons one of the PA, and must have formed a part of the original work

Weber, Ind Stul . IV. pp 112, 225 also VIII. p. -12

(op. cit., p. 354). According to the Panjika it means (15) na vidyate yogah varņāntareņa yeşām te ayogavāhāh: Those sounds which do not combine with other sounds are ayogavāhas. This definition does not convey any meaning to us. Uvața says akārādinā varņa-samāmnāyena samhitāh santah ete vahanty ātmalābham prāpmuvanty ayogavāhāh (on VPr. VIII. ): They are ayogavāhas because they attain their selves when combined with sounds like a (i.e. vowels). Similar is the view of the commentator of the Pratijñā Sūtra on II. 1 (see Benares ed.). This explanation too does not satisfy us and seems to be rather fanciful. Patañjali who is earlier and more authoritative than the writers mentioned above defines the term as yad ayuktā vahanty anupadistāś ca śrūyante (ed. Kielhorn, Vol. I, p. 28): 'Those sounds which are heard even though they have not been included in the Varna-samāmnāya (or the so-called Siva-sūtras).' Besides these there are other interpretations of the term by late authorities, but it will scarcely be of any use to discuss them. The explanation given by Patañjali can be followed without any scruple.

Alābu-vīṇā-nirghoṣo'danta-mūlyah svaránugah 1 anusvāras tu kartavyo nityam hroh śa-sa-seṣu ca 11 (23)

Tr. The anusvāra after the vowels not pronounced at the root of the teeth, should be made sonorous like the sound of an  $al\bar{a}bu-v\bar{\imath}n\bar{a}$ , but when it stands before h, ś, ş and s this pronunciation is compulsory [23].

Note 30. All the recensions except the AP. contain the above couplet. The anusvāra being a frequent sound in Vedas and the classical Skt. it appears very much likely that Pāṇini gave attention to it. Besides this for interpreting śaṣaseṣu ca we must invoke the help of Pāṇini's Paribhāṣā tasminn iti nirdiṣṭe pūrvasya (I. 1. 66). This also may be taken to show that this couplet belongs to the original PS.

Note 34. From this privage we derive a limit about an alternative promunciation which the amovers had before stops. This alternative promunciation has been provided for by Patini in his grammar (amiratare is equivalent to the promunciation of what according to Prof. S. K. Chattern is a "reduced" nasal occurring also in the late Mi IPs Ind Aryan o p. cit., p. 3600.

Note 52. Nurgher i dants-maly 231 add to taken as nurghous 4-alantan ab a.

Note 33 The rest couplet scents in the lik recommonly

Anurate emplodes in enarce est, ara-de se e de deir orthau fu en est nit, il e arainl dan east anne b & (21)

Tr. In the apparies, 1 stop section and difference many the two lips should be separated as about a configurable [21]

Note II The easy of the tend to the on the bound 6 (III 7) where the fully released. The reading of each tend in the Boundarian conferily compt. Vyöglisi yatlığ haret pulrân damiltiğlihyön va ca pidayet 1 bililiğ i atanı ili edalikiyin, tedead varnan prayojiyet 1 (25)

Tr. As the tierra corrawler cuts between two traws of) teeth taking care lest they should either be draiped or tidien so should one prenounce the (Ved c) speech sounds lest they should be dropped (i.e. claded) or differentiated (i.e. mis pronounced) [23].

There is pun in the words paisns and blods. The fact that the couplet mentions the dropping of varies in the Ve he accidation shows that the upper limit to the date of the composition of the couplet us a 200 B. C. when the

<sup>1. &#</sup>x27;The aroustes fell well is occurrente other tion d. p. a and him clarged to the streng through except soul is cade ability but ground the possible immegeneous acousts to the above care are h, h, s, n ard so. The sub-facilities when the aroustic star has the old dayord.'

tendency to drop intervocal stops as in the so-called Mahārāṣṭrī or the late phase of Saurasenī, was already beginning. This couplet occurs in the Yv. S. (195) and the Māṇḍūkī S. (48) too. We are not sure whether it originally belonged to the Yv. S. or the Māṇḍ. S, but it is sure that the couplet did not form a part of the PS. which may go back to a time earlier than 500 B. C. (see Introduction, § 36).

Note 35. The following couplet occurs next in the Rk recension and in the Yūj. recension it is no. 6. Of the two commentaries, only the Prakūśa touches it. AP. omits it.

Yathā Saurāṣṭrikā nūrī takrā ity abhibhāṣate (cvaṇ raṇgāḥ prayoktavyāḥ khearā iva khedayā (26)

The couplet as it stands in the Rk and the Yaj, recension and in the Prakāśa seems to be corrupt. The true reading may be that of the Nār. S. The Māṇḍ. S. and the Yv. S. gives the couplet in a developed form The purport of the couplet in all the above different forms is that the ranga is the nasalization of a vowel.

Note 36. Next occur the four following couplets in the Rk recension only.

Ranga-varnān prayuñjīran no graset pūrvam akṣaram \ dīrgha-svaram prayuñjīyāt paścān nūsikyam ācaret \(\mathbf{u}(27)\)

Tr. In pronouncing the ranga sound one should not swallow up the preceding sound; the preceding vowel should be uttered long and then the nasal sound should be uttered [27].

This couplet occurs in different Sikṣās. It is difficult to say where the couplet originally stood, but it is sure that it came in the PS. from another source.

Hṛdaye caikamātras tu ardha-mātras tu mūrdhani i nāsikāyām tathārdham ca rangasyaiva dvimātratā i (28)

<sup>1</sup> See the present writer's 'Mahūrāṣṭrī, a later phase of Saurasenī,' Journal of the Department of Letters, University of Calcutta, XXIII (1933).

In the Nār. S. (II. 4.9) this couplet occurs with variants  $n\bar{a}ry$  arām ity, rangah prayoktavyo Nāradasya matam yathā. In the Mānd. S. (112) it occurs with the variants:  $n\bar{a}r\bar{a}$  ity rangāh prayoktavyāh nakāra-parivivarjitā. The Yv. S. (190) however reads it almost like the Mūnd. S.

This couplet occurs in a slight different form in the Yv. S. (189) and the Lomasi S. (I. 8). The Māṇd. S. 110 can also be compared with this.

Hrdayad uthale tisthan kämsyena samanusiaran 1 märdavam ea dvi-mätrani ea jaghanvä 2 iti nidarsanam ((29)

Tr In the heart (re chest) there should be one matra and half a matra in the roof of the mouth and another half in the nostril. These are two matras of a ranga sound [23].

A ranga sound rising from (ht existing in) the heart (i.e. chest) has a sound like that of the belimetal (bronze) (and it has) softness and is two matrix long. Its example is 199/hours 2 [29]!

Madhye in kampayet kampam ubhau parérau samo bhaiet t sarangam kampayet l'ampam rathécéts nidaréanam y (30)

Tr The kampa should be made in the middle and its two sides should be made equal and the kampa should be accompanied by a ranga. Its example is rathera [30]

Norr 37 The meaning of the passage is not clear This couplet spreaming only in the RL ree maint and not being relevant with couplets which are undisputedly genuine we have considered it spurious. This like of the spurious passages, occur probably in some text not yet brought to light

Note 38 Next occurs the following couplet which has not been commented on in the Panyika though after recensions include it

Eram rarnāh prayol tarya nacyaktā na ca pīdītāh i samyag-rarnaprayogena brahma loke mahiyate n (31)

Tr The speech counds should be pronounced blothis. On uttering them in the proper manner one attains elevation in the world of Brahman [81]

Note 33a Fins couplet occurs in the \ar 8 (II 8 31) and also in the Mand 8 (1) an I might have originally belonged to any of these works It does not nt in with those stanzas of the PS which occur in all recensions and are undoubtedly genuine

<sup>&#</sup>x27; With the above couplet may be compared the formati S I 7. This passage seems to be corrupt

The couplet occurs in the Nar S (II 4 8) with some variation. In the Mang S (113) too this occurs in a varying form. Whatever be the true reading of the complet it is sure the BS in its or gain form the not contain it.

Note 39. In the Yaj. recension the above couplet is succeeded by the following one:

Abhyāsārthe drutām vṛttim prayogārthe tu madhyamām i śiṣyāṇām upadeśārthe kuryād vṛttim vilambitām ii (31a)

Tr. In memorizing the Vedas one should make his reading quick but in applying the same in rituals the recitation should be of medium speed, while at the time of instructing pupils, the Vedic passages should be recited slowly [31a].

Note 39a. This couplet occurs in the Nar. S. (I. 6, 21) and Yv. S. (54) and in a slightly different form it occurs also in the Mand. S. (3). It seems that the couplet occurred originally in the Nar. S.

Note 40. The next six couplets occur in the Rk recension only. They are being taken up serially.

Gitī sīghrī siraḥ-kampī tathā likhita-pāṭhakaḥ \
Anorthajño 'lpa-kaṇṭhas ca ṣaḍ ete pāṭhakâdhamāḥ \(32)
Mādhuryam akṣoro-vyaktiḥ padacchedas tu susvaraḥ \(data)
dhairyaṇ laya-samarthaṇ ca ṣaḍ ete pāṭḥake guṇāḥ \(33)

Tr. Those who recite the Veda in a singsong manner, (too) quickly, with a nodding of the head, use a written text at the time of recitation do not know the meaning of passages read, and have a low-voice, are six kinds of bad reciters. Sweetness, clearness, separation of words, right accent, patience and ability to observe time are six merits in a reciter [32-33].

Note 40a. These two couplets occur in the Yv. S. (198-199) and seem to have occurred there for the first time.

Sonkitam bhītam\_udghnṣṭam avyaktam anunāsikam (kāka-svorom śirasigam tathā sthāna-vivarjitam (k34)

Note 41. In the Nar. S. (I. 3. 11-12) this couplet together with another enumerates the fourteen faults of the Vedic chant. A translation of the two couplets are given below.

Shyness, fear, extreme loudness, indistinctness, undue nasalisation, repressed tone, undue cerebralization, non-observance of the places of articulation (in general) and (proper) accent [34], and

harshness, creating undue separation between words, uneven tone hastiness, want of due palatalisation: these are the fourteen faults in the Vedic chant.

Note 410 These two coupl is occur also in the Ly 8 (20 23) but they relate there to faults of recitation (r Iff a f sa) in teal of the faults in chant (of does) of the Nor S. But as the complete in this latter work have been preceded by the expression bharants of the flot of they are surely quoted there from some earlier work. It is probable that the couplets in question occurred in the Le & first

Upimiu dastan trantam miraitam rilambitam gadgadit im pra nt im i nispî litani grasta pidâl sirani ci coden na dinam na tu sanunlsuam a (35) Pratish withen milwing urth sthaten i serrena & udula-ratop imena 1

malloan dine lantha ortena cuca

cal rábe i sami unta sanniblicu i u (36)

Taram tu rulyat sarane trion

sire-jalam tie es sida j rayony im j manura-hamsdayaldırlı-sr ıranam

tuluena n'i lena strah stlutena n (37)

Tr One should not rente a Vella passage in und rione between one s teeth quickly, haltingly slowly with a hoarse voice in a sing song manner with repressed soice omitting focessionally) words and syllables and in a plaintive vo ce [35]

In the morning (the Vedic student) should real (mantras) with a voice from the chest, which should be (as de p tone i) as the gravi of a tiger. In the milday he should real it with so c from hathrost which should be like that of a cakravala In the third on ma (ie the evening offer no) he should recite it in the highest ritch from the roof of his mouth and his voice should be like that of a purcock goose or cucken [36 37]

Note 41b These couplets occur also in the Mand S tt 12) but we are not sure whether they originally belonged to this work

Aco sprota pinas to Isan nema-sprotah balih smrtih 1 šegah spreta kilih proliti nibolh Inupra lanatah n (18)

- Tr. The vowels are without touch, semi-vowels slightly touched, s, s and s are half-touched sounds, and the remaining consonants are touched (i.e. stops) [38].
- NOTE 42. The degree of touch in this connexion is with regard to the cavity of the mouth or rather the space between the two parts of the mouth which touch or approach each other before speech-sounds are produced.

Namo` anunāsikā nahro nādino ha-jhaṣaḥ smṛtāḥ | ī×an-nādā yaṇ-yaśaś ca śvāsinas tu kha-phádayaḥ || (39) Tṣac-chvāsāṇiś caro vidyād gor-dhāmaitat pracakṣate |

- Tr. Nam (i.e.  $\tilde{n}$ ,  nd  $\tilde{n}$ ) are produced through nose, and hexcept when it is combined with r; and jhas (i.e., gh, jh, dh, dh, bh) are voiced, semivowels (y, r, l, v) and jas (i.e., j, b, g, d, d) slightly voiced, the group beginning with kh and ph (i.e., kh, ch, th, th and ph) breathed, car (i.e., k, c, t, t, p) slightly breathed. This has been called the basis of speech [39-40a].
- NOTE 43. The hemistich 39a seems to have created difficulty from very early times. The Panjika (19) explains the passage first with the reading name and this seems to be the right reading. The second reading discussed in it could not have been original in spite of its quoting Saunaka's Rk-Pratisakhya.
- Note 44. In the Amoghanandini, S. 40, we have hakaro rephasangukto nādir bhavati nityašah: 'h combined with r is always as a voiced sound. The true nature of the nahro has not been marked by the author of the Pañjikā. He seems to have been moded by a wrong apprehension of the testimony of the Amoghanandini S.
- Note 45. The terms nādī, īşannāda, švāsī, īṣac-chāsa stand for voiced a-pirate, voiced non-aspirated, unvoiced aspirate, unvoiced non-aspirated respectively. The term īṣau-nāda

perceivally mean laying seds as well as noda or ubhayatmal a ic, seosa-nodatimaka. Hence in the RPr (NIII 2) we have terms like śrósa, noda and śrósa-noda. The TPr (II.9) however uses śrósanoda in cree of ha-kōra and sceins to describe it as a sound midway between voiced and univoiced (II.6) and at the same time calls it voiced (II.3).

Note 40. The following couplet occurs in the Yaj recension (33). The like recension gives only the first bail of it.

Dal şîputrak Pămınır yasenédiyi eyahrtanı bhuci i (10) ratnabhütanı idim sastranı prihirudim samınıal asıtanı (103)

Tr By Pinni, the son of Diksi, who has primulgated in this world this science which is as it were a jewel has also rescaled it to the world (for the first time) [10:40:1]

Notr 46a The PS has been called the mild jama in the In han tradition [S Varma, op cit, p 5]. This spurious verse which may be very old seems to lotlow this. There is scarcely any doubt about the importance attached to phoneties by the ancient Hindus. Patanjah too stresses the importance of the subject in the following terms: tebhyas latea sthana? arandnu praddnajatebhya cas tid stabda upadatyante (ed. helhorn Vol. I. p. 5). Those who are acquainted with the places of articulation and innance of adjusting vocal oreans accordingly were taught the Vedic text.

Note 47 The following nine couplets occur in the Rk recension only

Chandak pādau tu cedasya hastan kalpo'tha pathyate i yyotisān ayanam cal-ur mrul lank Grotram ucyate # (11) Siksā ghranam tu cedasya mukham cyūl aranam smrtam i tasmāt sānyam adhityātia brahuntoke mahiyate i (12)

Tr (First) Metries which is the two legs (of the Veda) is read and then the Kalpa which is its two hands. This Secree of the Movement of turning the (Astronomy) is its eyes, and the Nirukta is called its ears, the Siky is the nose of the Veda, and Grammar is its mouth. It is for this reason that one studying the Veda with all its lumbs (i.e. accessory studies) sittains a high position in the realing of Brobman [4142]

Udāttam āklıyāti vṛṣo'ṅgulīnāṃ
pradeśinī-mūla-niviṣṭa·mūrdhū \
upānta-madhye svaritaṃ dhṛtaś ca
kaniṣṭhikāyām anudattam eva \((43)\)

Tr. The top of the thumb when held at the root of the index finger indicates the udatta tone, and held at the middle of the ringfinger (upānta or last but one) and at (the middle of) the little finger it indicates respectively svarita and anudātta [43].

Udāttam pradešinīm vidyāt pracayam madhyato'ngulim i nihatam tu kaniṣṭhikyām svaritopakaniṣṭhikām ii (44)

Tr. The index finger should be known as the udatta, the middle finger pracaya, the little finger as nihata and the ringfinger as svarita tone [44].

Note 47a. These two couplets have not been traced in any available Sikṣā.

Antódāttam ādyudāttam udāttam anudāttam nīca-svaritam l madhyódāttam svaritam dvyudāttam tryudāttam

iti nava-pada-śayyā n (45)

Agnih somah pra vo vīryam havisān

svar Bṛliaspatir Indrā-Bṛliaspatī 1

Agnir ity antódāttam, soma ity ādyndāttam, préty udāttam, va ity anudāttam, vīryaṃ nīca-svaritam (46) Haviṣām madhyódāttam, svar iti svaritam, Bṛhaspatir

iti dvyudāttam, Indrā-Brhaspatī iti tryudāttam 🛚 (47)

Tr. There are nine kinds of accents in padas: antôdātta, ādyôdātta, udātta, anudātta, nīca-svarita, madhyôdātta, svarita, dyudātta, tryudātta. Examples of these are Agnih, Somah, pra, vo, vīryām, haviṣā, svah, Bṛhaspatih, Indrā-Bṛhaspatih, (Agnih, Sómah, pra, vo, vīryàm, haviṣā, svàr. Bṛhaspatih, I'ndrā-Bṛ'haspatih) [45-47].

Note 47b. This passage with slight variation occurs in the Nār. S. (II. 7 5.6) and seems to be quite relevant there. It is almost certain that the Rk recension took it from there.

Anudātta liedi jūcyo mūrdkny vdātti udahetak ( scaritah ) arna-mūliyah, sircāsyo piacayah suijtih (48)

Tr Anudates is to be known in the chest (he heart), udates at the root of the ear, and process in the entire mouth

Norr 470. This prisings hearn theen traced in any of the available. Sikris. Perhaps it has been taken from some S which has not yet come to light [49].

Casas tu cadate motrom decemotram te eco cayasah 1 sit hi rauti tri-mateum tu mal mas te ardha-matral am \$ (10)

To The cdar gives out one mates and the crow two maters the reaccektline maters and the inuncoose only ball of a mater [40]

Note Vid. This pressue occurs in the Lornatic S. (VIII. 9), the RPr (XIII. 20) and with slight variation in the No. (17-10) and in th. Man I. S. (133), but it teems to have occurred first in some of those. Sike a and not in the PS.

Note 49 The following two couplets occur in the AP. lik and haj recensions and the Prakasa comments on them

Kutirthäd ägalam dagdhum aj ararnam ca bhal stam 1 na lasya parimol koʻsti papukir na 1 ilrisol z (50) Sutirthäd ägalam ryal lam scánnayyam xuryarasthitam 1 suscarena sucaktrena prayuktam brahma röjale z († 1)

Tr In the repetition of that which has come from a bad ācurya, that which is indistinct (lif burnt), inspronounced from the faulty text there is no deliverance from its dement as from the snak, like sin [50]

But in repeating with good accent and voice (lit mouth) that which has come from a good accerts and is distinct, from the good text and is well established, the Veda sinces [51]

Note 49a. These two couplets occur in the  $\n$  8 (II 8 10 11) and the Manyl 8 (100, 163). It seems that they occurred for the first time in the Ner S.

Nore 49 In the Yaj and AP recensions the following couplets occur after the passages given above

Na I arālo na lambóşiho nátiyakto nátiunāvil ah 1 gadgado baddhajiktas ca prayogān taktum arhait 11 (51a) Tr. One ought not to repeat mantras with teeth shown, lips unduly protruded and with indistinct, unduly nasalised and half choked-up voice and immobile tongue [51a].

Note 49a. This couplet occurs in the NS. (II. 8.12), the Māṇḍ. S. (156) and the Yv. S. (25). It seems to have occurred originally in any of these.

Note 50. The following couplet occurs in the Rk recension and the Pñj comments on it. Though the Prakāśa quotes it we are not sure whether the author reads it in the text of the Sikṣā. (For further notes on this point see below.)

Mantro hīnah svarato varnato vā

mithyā prayukto na tam artham āha ¡ sa vāg-vajro yajamānaṃ hinasti

yathéndraśatruh svarato 'parādhāt 11 (52)

Tr. A mantra uttered either with a defective accent or pronunciation is badly done and it does not carry the proper sense. And it is like a thunderbolt of speech and kills the yajamāna just as 'Indrasatruḥ' did on account of its wrong accent [52].

Note 50a. This couplet occurs in the Nār. S. (I. 1. 5) and the Amoghanandinī S. (122). Besides this the couplet occurs in the Mahābhāṣya with a variant duṣṭaḥ śabdaḥ for mantro hīnaḥ (ed. Kielhorn, Vol. I., p. 2).

Note 51. The following couplet occurs next and in the  $\mbox{\it Rk}$  recension only.

Avākṣaram anāyuṣyaṃ visvaraṃ vyādhi-pīḍitam lakṣatā(ra?)-śastra-rūpeṇa vajraṃ(?) patati mastake la (53)

Tr. (When a mantra is) deficient in a syllable it tends to diminish life, and (when it is) lacking in proper accent it makes the reciter troubled with illness, and the syllable (wrongly treated) will strike one at the head as a thunderbolt [53].

Note 51a. This corrupt couplet has not been traced anywhere. It may be a late composition in imitation of the preceding couplet.

Note 52. The two following couplets occur next in the Rk recension and there only.

Hasta-hīnaṃ yo'dhīte svara-varṇa-vivarjitam | Rg-Yajuḥ-Sāmabhir dagdho viyonim adhigacchati | (54)

Hastena redam yo'dhile scara-carnartha-samyutam r Ra-Yamh-Sāmabhih pūto brahma-loke mahīnate n (55)

Tr If anybody reads (thu Veda) without a show of hands and does not observe proper accents and places of articulation Rk, Yajus and Saman burn him and (on death) he attains rebirth as an inferior animal [61]

And a person who reads the Veda with a show of hands, observes proper accent and places of articulation and knows the meaning of what he reads is purified by the Rk, layus and the Siman and is placed high in the realing of Brahman [55]

Note 52a. These two couplets with slight variation occur in the Nr S (10 41) and the Mand S (31 32, 33 31). It is possible that the like recension has adapted them from any of these

Note 53. The two following couplets occur in the Yaj and the Rk recensions and have been commented on by the Pañjiku and the Frakuša

Samkarah sāmkarīm prādad Dāksi-putrāya dhīmate 1 vāmmayebhyah samāhrtya der un vācam ut silutuh p (56) Yeudksara-samāmnāyam adhugamya Mahesearut 1 krtsnam vuākaranam proklam tasma Pāunnaye namah p (57)

Tr Drawing the divine words from the entire domain of speech (commaja) Suikara gave this, his science (Suikarim) to the wise son ut

Daks: This is its basis [50]

Homage to that Pinni who having received the traditional loro of speech sounds (Varna samāmnāya) from Siva has told us the entire

grammar [57]

Note 63a These two couplets do not occur in the AP rec. and 57 is wanting in the Prk. As to the authorship of the so called Syvasifiras, which is clearly mentioned in them, there is a great divergence of opinion. But it is possible that even if Panni was not their author he was at least

responsible for their present form (for details see Introduction, §§ 12-15)

Nozz 54 The two following couplets occur in the Rk recension only

Yena dhautā girah puņisām vimalaih sabda-tāribhih 1 tamas cajūānajam bhumam tasmai Pannaye namah 11 (58) Apāaududhasya lohasya pāānāūjāna-sabdasyā 1 caksur nimilitam nena tasmai Pānmave namah 11 (59) Tr. Homage to that Pāṇini who has washed off the human speech with pure water of words and has pierced through the gloom of ignorance [58].

Homáge to Pāṇini who has opened with the collyrium pencil of knowledge the eyes of people blind with ignorance [59].

Note 54a. These two couplets, have not been traced in any available Sikṣā, but the second one seems very much to be an adaptation of the opening śloka of a not very old tract called the Guru-gītā. In the latter work we have  $Sr\bar{\imath}$ -gurave for  $P\bar{a}$ pinaye.

NOTE 55. The next couplet occurs in the Yaj. and the Rk recensions and both the commentaries have touched it. But AP. does not contain it.

Trinayana-mukha-niḥsṛtām imāṃ

ya iha paṭhet prayataḥ sadā dvijaḥ ¡ sa bhavati paśu-putra-kīrtimān

sukham atulam ca samaśnute divi diviti (60)

Tr. Those among the twice-born who always devoutly read this (work) which has come out of the mouth of Siva (lit. three-eyed one) obtains cattle, progeny, fame and will attain happiness in heaven [60].

Note 56. This couplet again ascribes the whole work to Siva, though from some of the spurious couplets we have, already learnt this. But the fact that this work goes in the name of Pāṇini and not in that of Siva—in which case it would have had a name like the Saiva or Siva Sikṣā, seems to give strong grounds for considering this story as an apocryphal one.

#### INDEX

### 1. Phonetic Terms

 Numbers precised by 'n' refer to Notes and the others refer to number of couplets translated (pp. 49-80).

adrudatta, 45, 45 agherata, n12, 2) aktare, 27, 53 alpapraga, el 3 antebatha, 15, m2) antofátta, 45, 16 anuditte, m12, 11, 12, 43, 45, 45, 45, anunanka, n27, 20 ingrisks, 5ts anupradina, 10, n12, a13, n11. 33 antisvåra 5, n5, 22, n91, a27, 23, n30, n31, 21 ardham tra. 13, 221, 28, 43 asseyuts, 16 aspinta, 34 Arys, n12 Asya-prayatna. m12 anra-ye, 16, e19 bābya prayatna, e13 dants, 19 dentamüla, n17 dantamülya 23 dantys, 17 dantyauetha. 18 dirgha, 27 dubsprata, 6, n6 dematrata, 28, 29, 49 dyudatta 45, 47 gboss, 20 ghoyata, n12 bresva. 11 fascabyāsa, 40, n45 francada, 39, n45 Isatepreta, no. n12 jihvāmūla, 13, 18 kāla, 10 kampa, 30

In his commentary to the PS. (Benares, Samvat 1990) Pandit Kāliprasād Miśra thinks that Pk. 31, 37, 48, 54 and 55 are spurious (p. 27), while another recent editor Pandit Rudraprasād Sarmā in his commentary to the same work (Chowkhamba, Benares, 1937) considers Pk. 28, 33, 34, 44, 54 and 55 to be spurious (see his comments on these).

and Liebich, Zur Einführung, pp. 30 ff. and A.B. Keith, A Hist. of Skt. Lat., pp. xxv, xxvi.

Page Mrx line 12

after Pingala read:

Misra evidently under the influence of the commentary Siks prakts a scribes the PS, to Pingali (pp. 1 and 27). Tripithi too does the same (p. 30). Sarma however refutes the view and quotes Madhusüdana Sarasvatt in his support (p. 23).

Last line after the Julistop add. See also Mangal Dev Shastri, RPr., Vol. III, Appendix III (pp. 329-41).

Ivii line 24 after the fullstop add See Mangal Dev Shastri, RPr., Vol. 111, p. 111.

Iviri Add to the footnote 2 the following

It came to my notice alterwards that Bhattopidiketta ascribes the Ritantra-vyākaiana to Audvrap. In his Sabdakaustubha he write त्या गरक्तम्याकारच्या बान्दीय-मचचय गाँता चीरवाजर्षि पद्मवत् पनस्याग्यमंगीने मध्ये यसः पूर्वेष्य गुण रति (Chowkhamba ed., p. 113).

Page 53 Line 14 after pp. 99 ff. read See also Tripāṭhī, p. 5 and Miśra, pp. 28 ff.

65 last line after to PS. read:

Tripāṭhī suggests that dvih-spṛṣṭaḥ and not duh-spṛṣṭha is the correct reading and quotes the Varṇaratna-pradīpikā (15) to support this view (pp. 5 f.). Sarmā contradicts him and considers the reading of the passage in the printed text (in the SS.) of the work to be defective (see p. 4). Miśra refers to the above-mentioned passage and quotes another view which reckons weakly pronounced y and v as durhspṛṣṭa (p. 4). The RPr. (XIII. 3) however takes y, r, l and v as duhspṛṣṭa, but Dr. Mangal Dev Shastri translates duhspṛṣṭa-karaṇa as imperfect contact (p. 95 of his RPr., Vol. III).

58 Aftar the Note 15 add the following:

Udātta, anudātta and svarita arise from the peculiar conditions of the body called  $\bar{a}y\bar{a}ma$ ,  $vi\acute{s}rambha$  and  $\bar{a}k\dot{s}epa$  respectively. For the definition of these terms see Miśra, p. 7.

59 line 20

read 'dantamūla'

Add to the Note 17 the following:

Sarmā considers the reading nāsikoṣṭhau to be wrong and corrects it to nāsikauṣṭhau (p. 7). The grammatical objection raised by him against the accepted reading is valid but the laxity in this matter may be an original feature of the text which was written in the Chāndasa style (vide Introduction, 26).

line 4 from the bottom read 'ukārādi param padam.'

of of the first of

Page 63 Linc 12 after the fullstop read See Misra on the couplet 18 (p 10)

line 6 from the bottom, after the joolstop add

Misra has very intelligently ascertained the correct reading (see p. 11, li 18 19). Tripithi too has correctly taken elaratkarayor as the correct reading but his interpretation of the presign is misleading (p. 11, ll 1 ff.)

64 line 15

read vivrta (open)

.. 21 add after the fullstop the following

Misra thinls that the samvita sound mentioned in this couplet relates to half c and half o (i c, short c and short o) and refers to Patamah s Mah ibh isva (pp. 11 f)

line 6 in the footnote read a and a respectively

65 ", 15 add See Tautt Pr., II, 13 14, R L Turner in Asutosh Mool ergee Silver Jubilee Volume, III, p 337 Jules Bloch, L Indo Arven, p 33

Last line, add the following

As Sarma comments on the Rk recension (p 10) he feels a difficulty about the interpretation of the passage and invokes the authority of the Sabdaratna but such a difficulty does not arise when we read upadhinamya, etc., between the two hemistichs of Rk 22

66 line 14 after nasikya add

(see Mangal Dev Shastn, Rgveda Pratisakhya, Vol III, pp 151 52, Notes on I 41)

line 4 from the bottom omit T Pr

,, 3 from the bottom add the following

See also Mangal Dev Shastri, op cit, pp 143 44 (Notes on p 20)

67 line 4 after the fullstop add

But in this matter Macdonell follows Whitney, see 'A Vedic Grammar for Students, § 10f 29b, 39 Page 68 last line add the following:

The Alābu-vīṇā used in modern Indian music was probably invented after the Gupta period, but this should not bring down the date of the above passage. For Alābú-vīnā mentiond in this passage was in all likelihood a very primitive instrument like our modern ekatāra or one-stringed vīṇā quite different from its late development the modern vīṇā. Its very crudity speaks for its great age.

- 69 line 12 read 'dvir oṣṭyau' and 'yathaukārau.'
  - ,, 20 for does ,, do
  - ,, 21 ,, 'damstrābhyām'
- 70 2 after the fullstop add the following:

From what Miśra says we understand that patana (dropping) of letters means spirantizing them and bheda (or differentiating) is de-aspiration of them (अतीवार्जवेणी-चारणे वर्णा मुक्ता सवन्ति न सम्यग् अवगताः सन्ति ककारोऽयं खकारो वा। न च प्रपोद्योचारयेत् येन खकारोऽपि ककारवत् प्रतीयते (p. 15).

line 4 from the bottom read 'ara-ity' and 'rangali'

,, 3 from the bottom ,, Māṇḍ.

71 ,, 14 add the following:

MSS. read samau bhavet. But this is grammatically wrong. Hence we tentatively read samo. Miśra explains this as an ārṣa usage (p. 17).

line 6 from the bottom, add the following:

Tripāṭhī explains  $p\bar{i}dit\bar{a}$  as 'pronounced with more breath which lengthens short vowels' (p. 17).

72 line 19 read recitation,

,, 24 add the following:

Tripāṭhī explains 'likhita-pāṭhakaḥ as one reading from a book written by oneself' and alpakaṇṭha as 'one

who has not practised recitation (p 18) So does Sarma (p 14) and besides this he considers the couplet No 33 to be spurious (loc cit)

line 5 from the hottom read the place of

Page 74 line 2 for s, s and s read s, s, s and h

,, 12 Insert , (semicolon) after nose and , (comma) after  $\tau$ 

74 line 8 from the hottom read the following

rephasamyukto' nadir, etc

line 7 from the bottom read always as an unvoiced sound

lines 6 4 omit 'He seems to have of the Amogha

75 line 9 read Paninir yas tenedam

76 line 14, add the following

Sarma considers the couplet No 44 to be spurious (p 18)

77 line 5 ff cancel the Note 47c and read the fallowing

This passage with a slight variation occurs in a late work named the Svarastaka S by one Ananta (see SS, p 365 Tripathi, p 25)

78 line 6 for the Pnj read some MSS of the Pnj , 8 after the fullstop read

The original Pnj probably did not contain this (see p 22, line 6)

79 12, add the fallowing

Miśra considers conplets 54 and 55 to he spurious (p 27) and so does Sarma (p 21)
